Latest app visual review

23 October 2026 · Flutter for Android and iOS

A clearer way to track everyday money.

An updated first-use journey and more direct tools for spending, budgets and savings.

Try the app's ideas

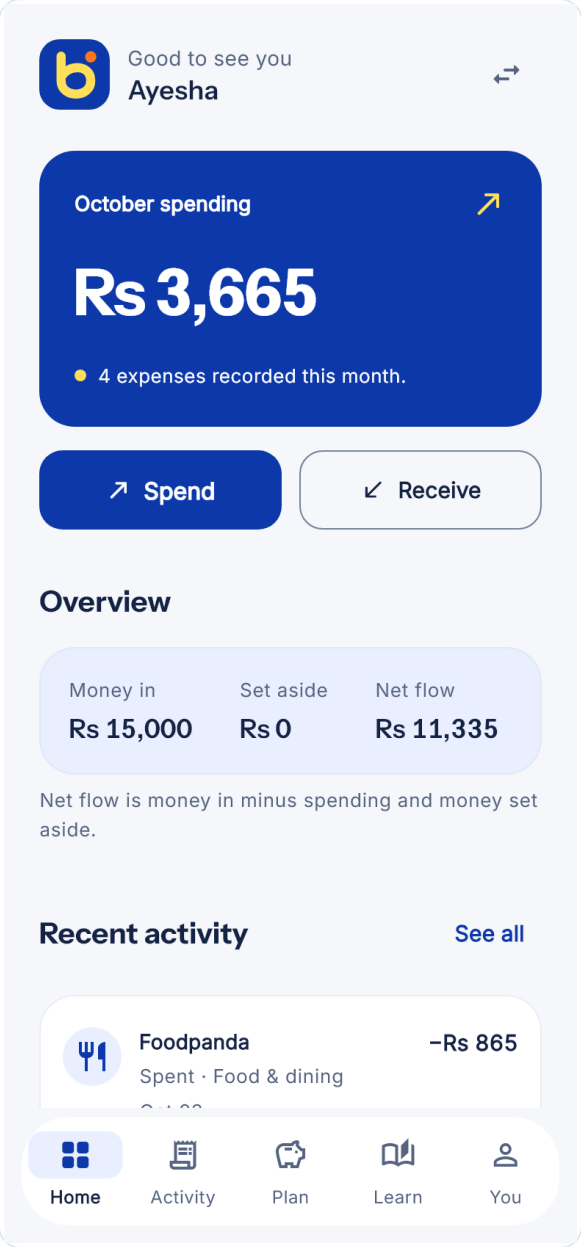

Interactive spending, budget and goal examples during onboarding.

Record and understand

Separate Spend/Receive forms, clearer activity and filtered totals.

Make a plan

Budget progress, savings targets and useful first-action prompts.

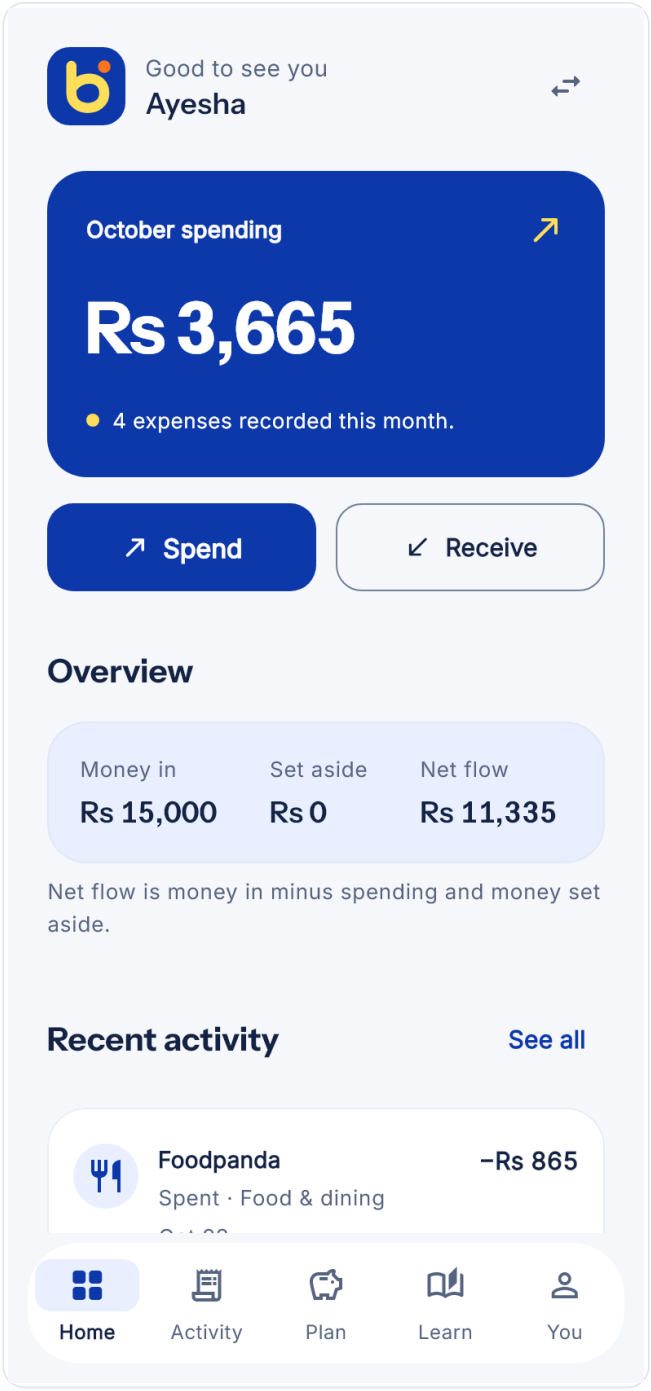

About these screenshots

Actual Flutter renders of the latest app, using isolated sample records and account fixtures. Amounts and names are examples. Captures show selected scroll positions; animations are described in the captions.

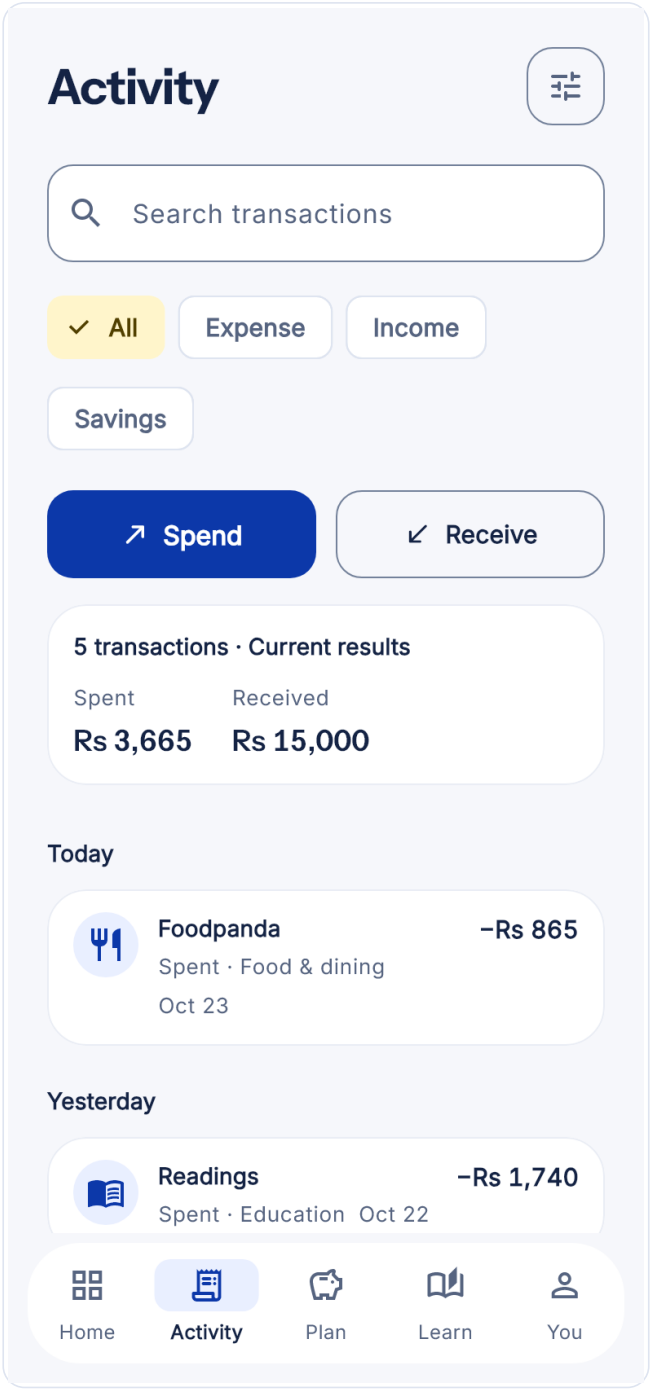

Everyday money, at a glance

The main expense-tracking experience.

Home

Monthly spending, recorded expense count, Spend/Receive and a clearly explained net flow.

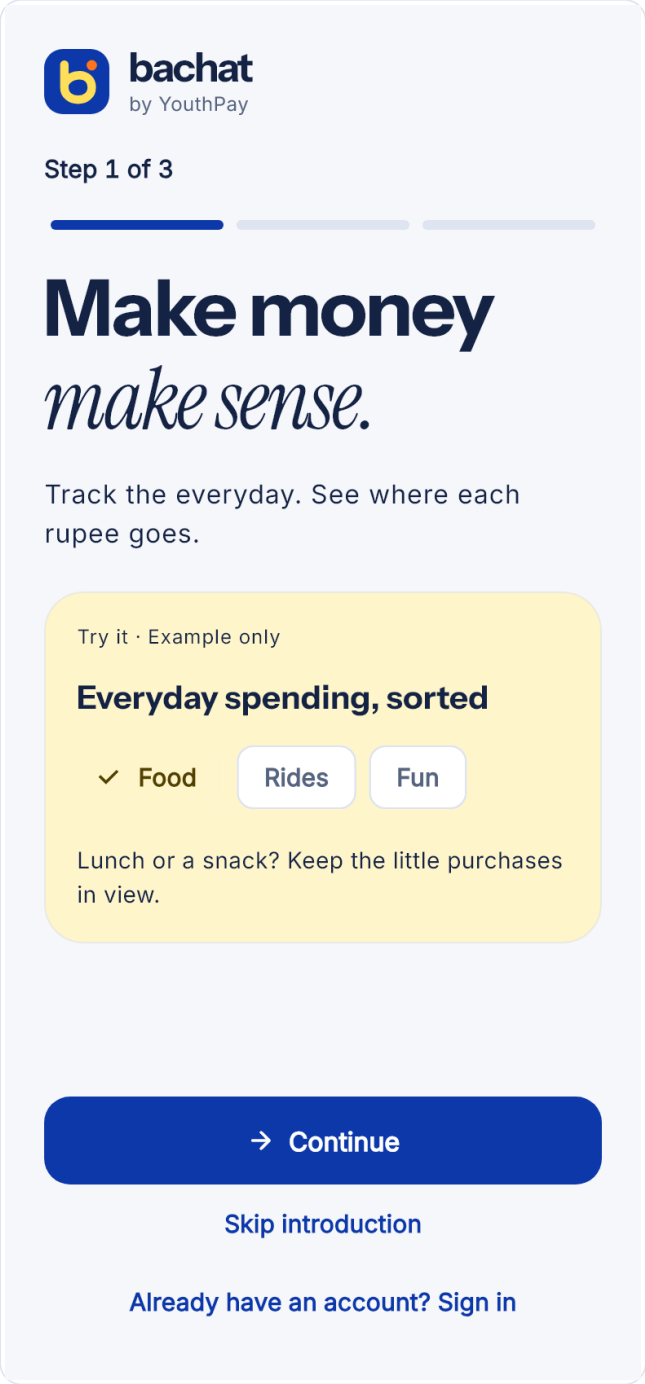

Activity

Search, direction filters, totals for the current results and dated transactions.

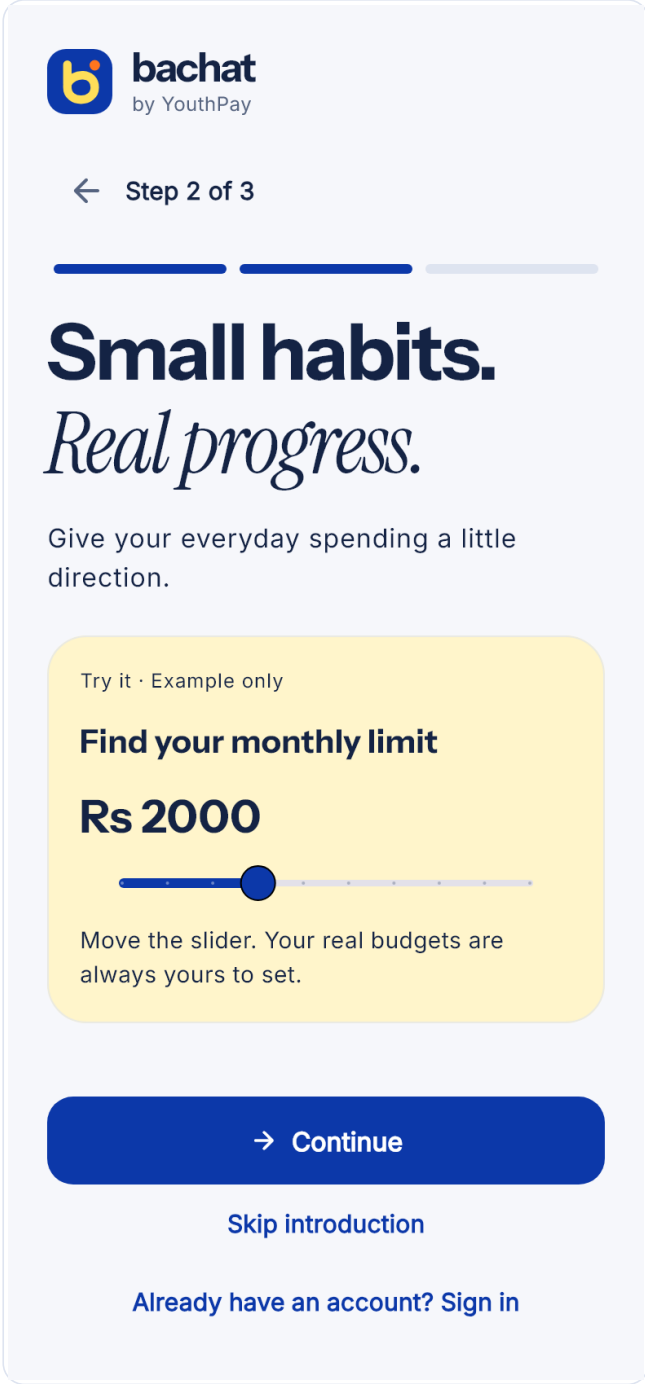

A hands-on introduction

Three short steps explain the app with examples you can change.

1 / Understand spending

Choose Food, Rides or Fun. The description responds to the selected category.

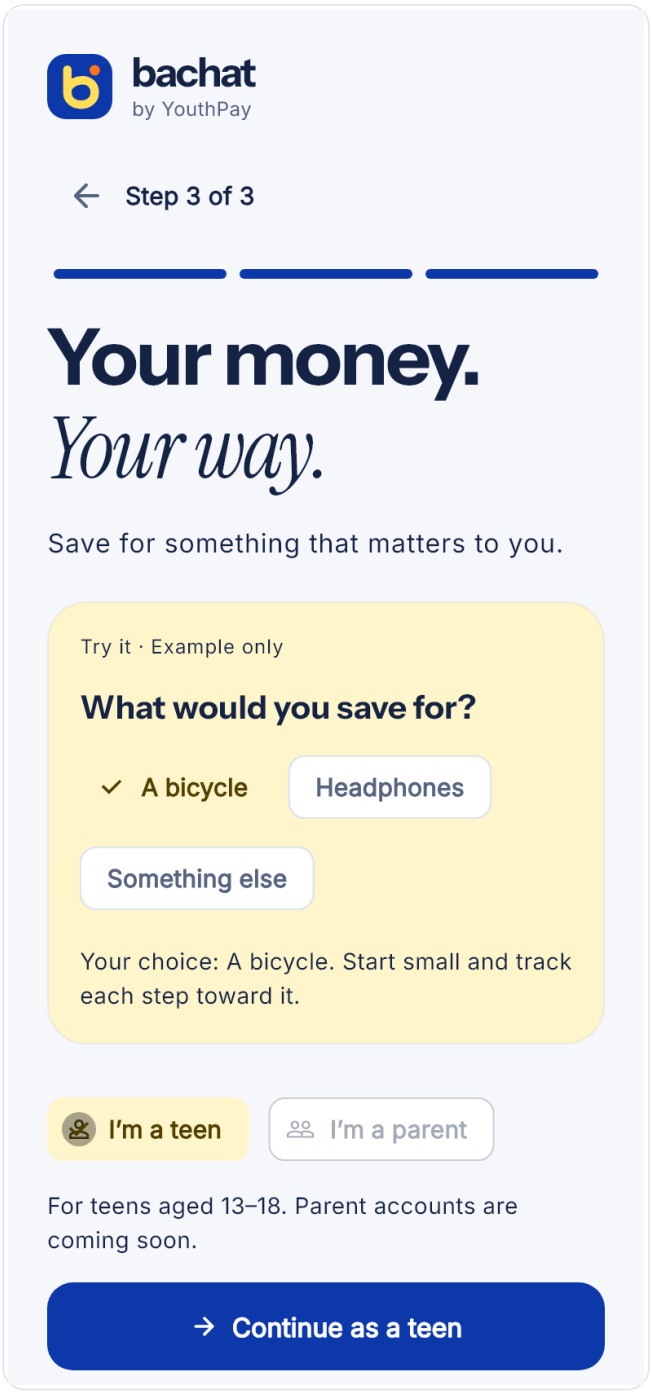

2 / Explore a budget

Adjust the example monthly limit. Back, Skip and direct sign-in remain available.

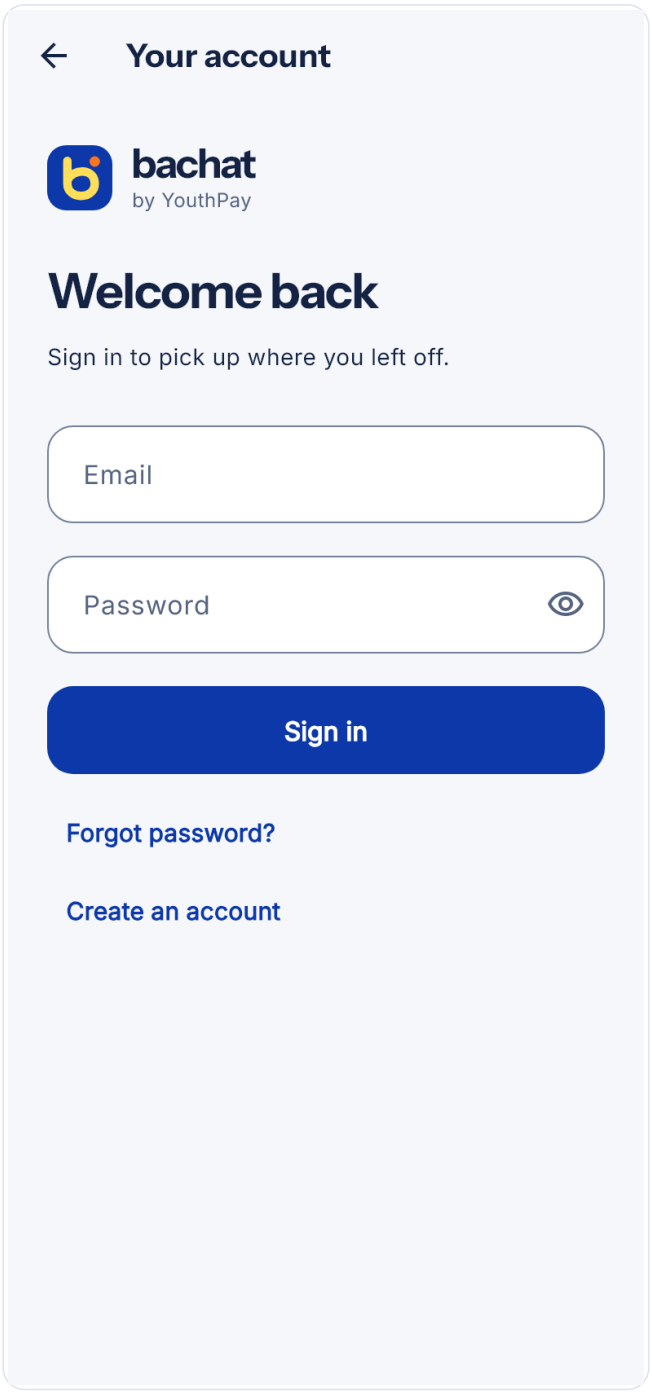

From a goal to your account

Examples stay separate from real transactions, budgets and savings goals.

3 / Choose a goal

Explore what you might save for. Teen accounts are enabled; parent accounts remain unavailable.

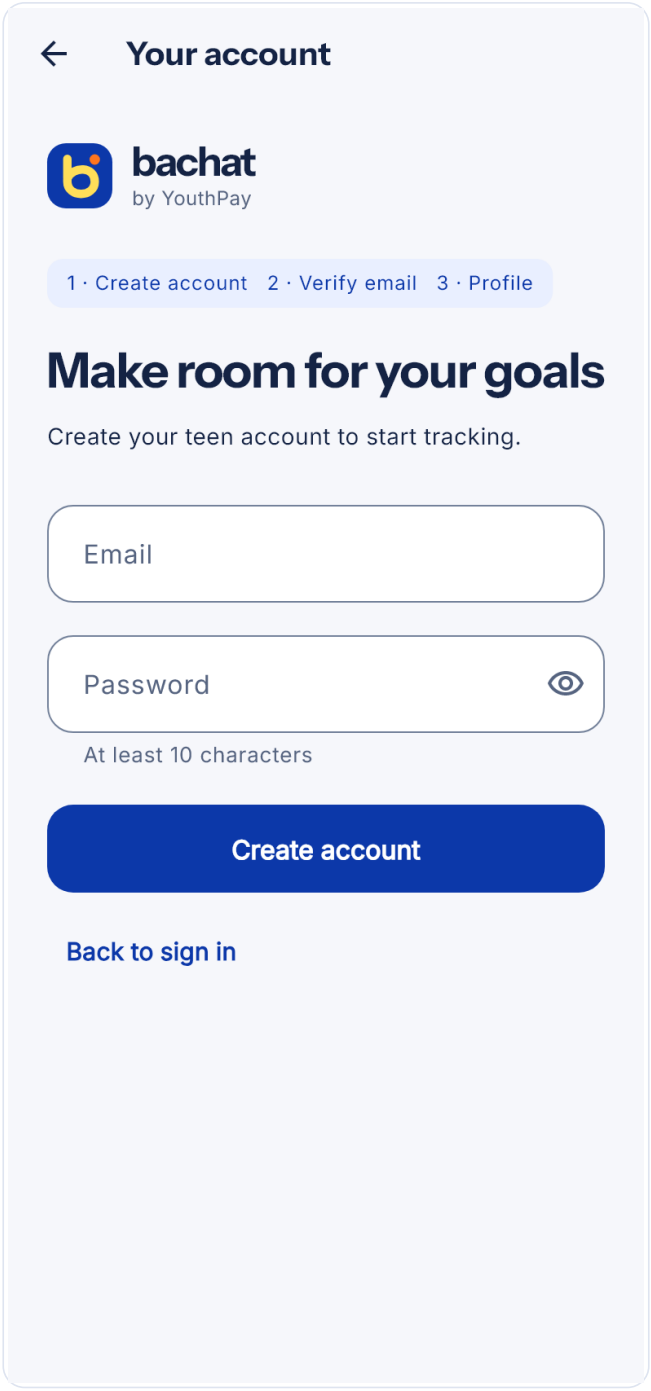

Sign in

Email and password entry, password visibility, account creation and recovery. Back returns to the introduction.

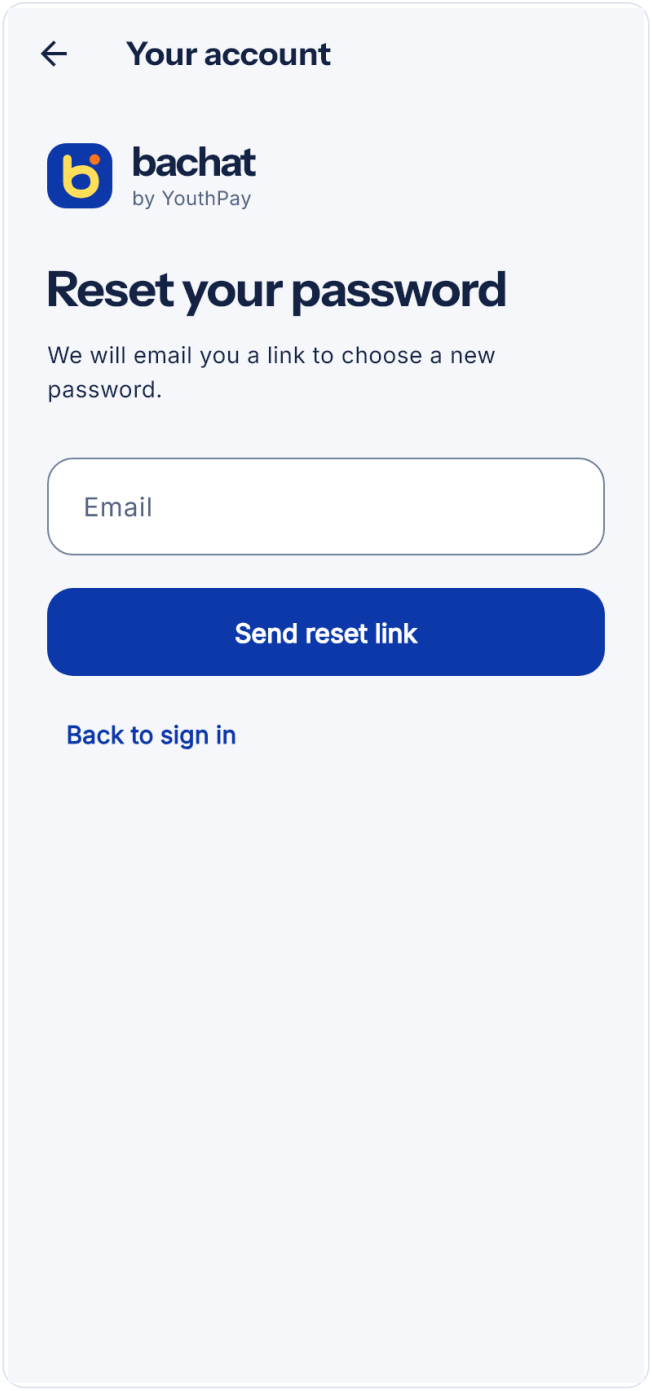

Create an account or recover access

Persistent labels and a clear account-setup sequence.

Create an account

The screen explains account creation, email verification and profile completion.

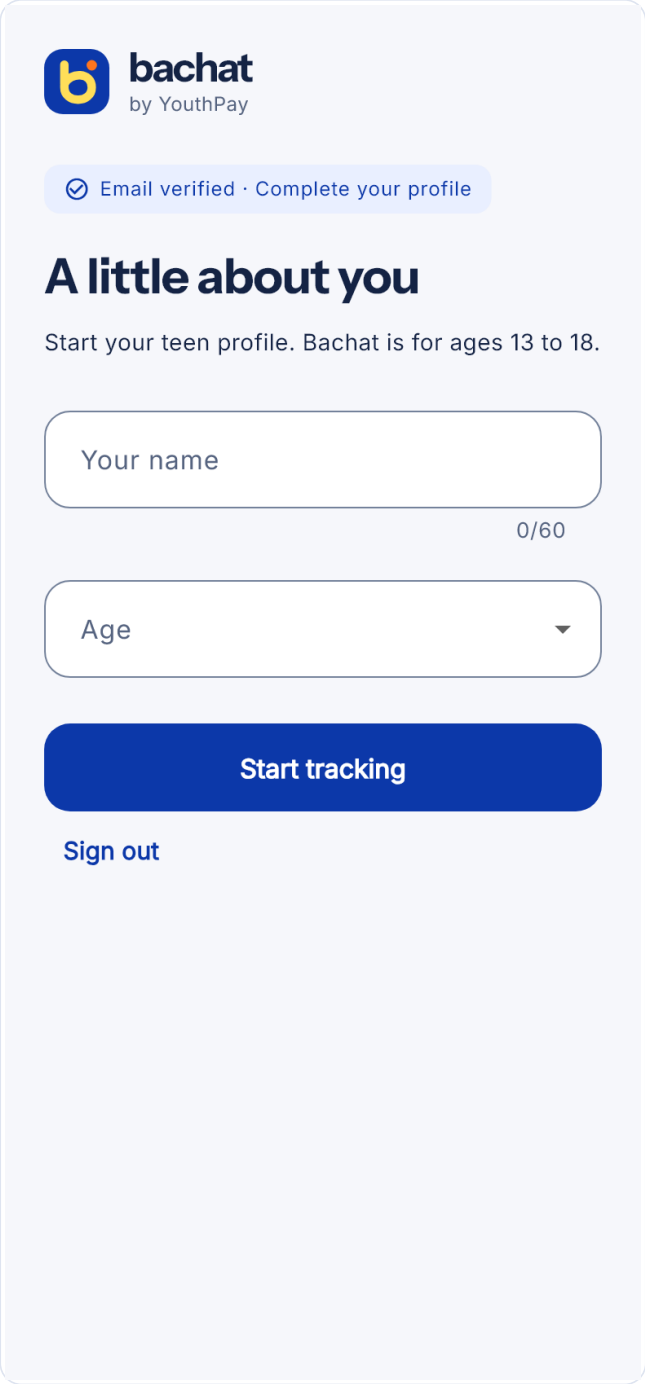

Reset a password

Request an email link, or return to sign-in. This capture does not send an email.

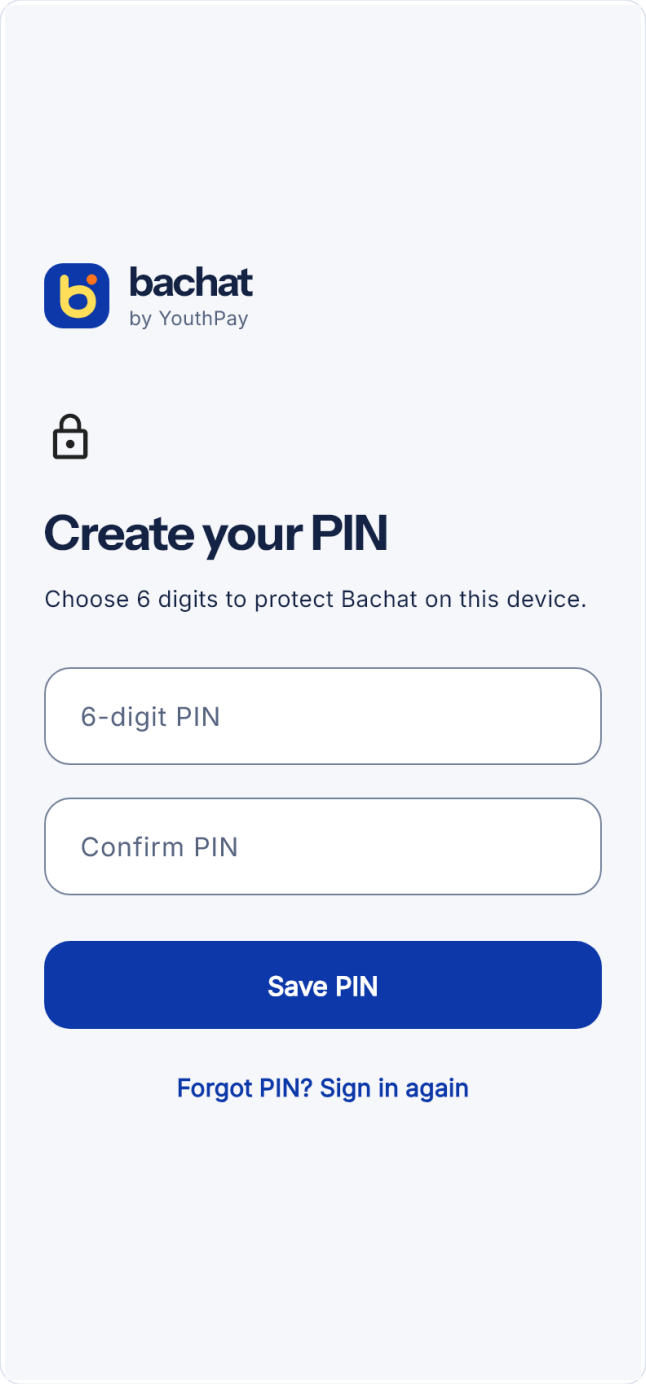

Profile and device protection

The account journey includes a profile and a separate PIN on each device.

Complete the profile

After email verification, enter a name and choose an age from 13 to 18.

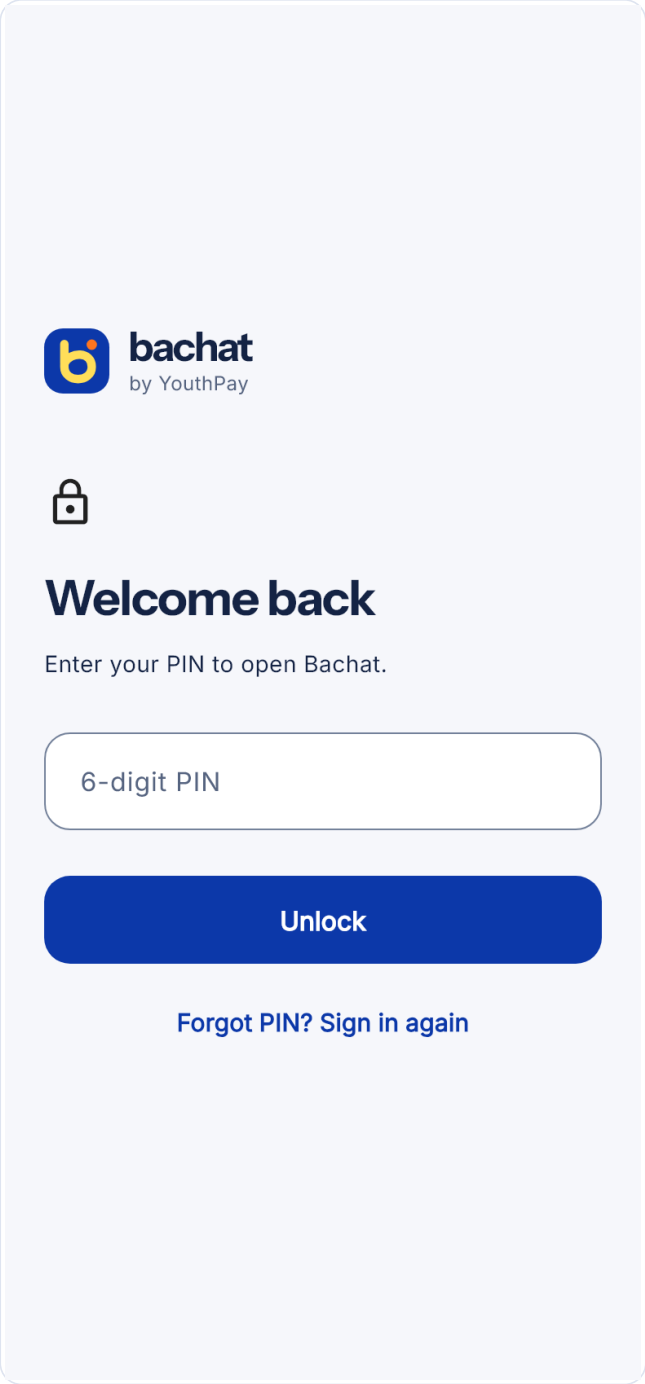

Create a PIN

Choose and confirm six digits. The pictured session uses an isolated account fixture.

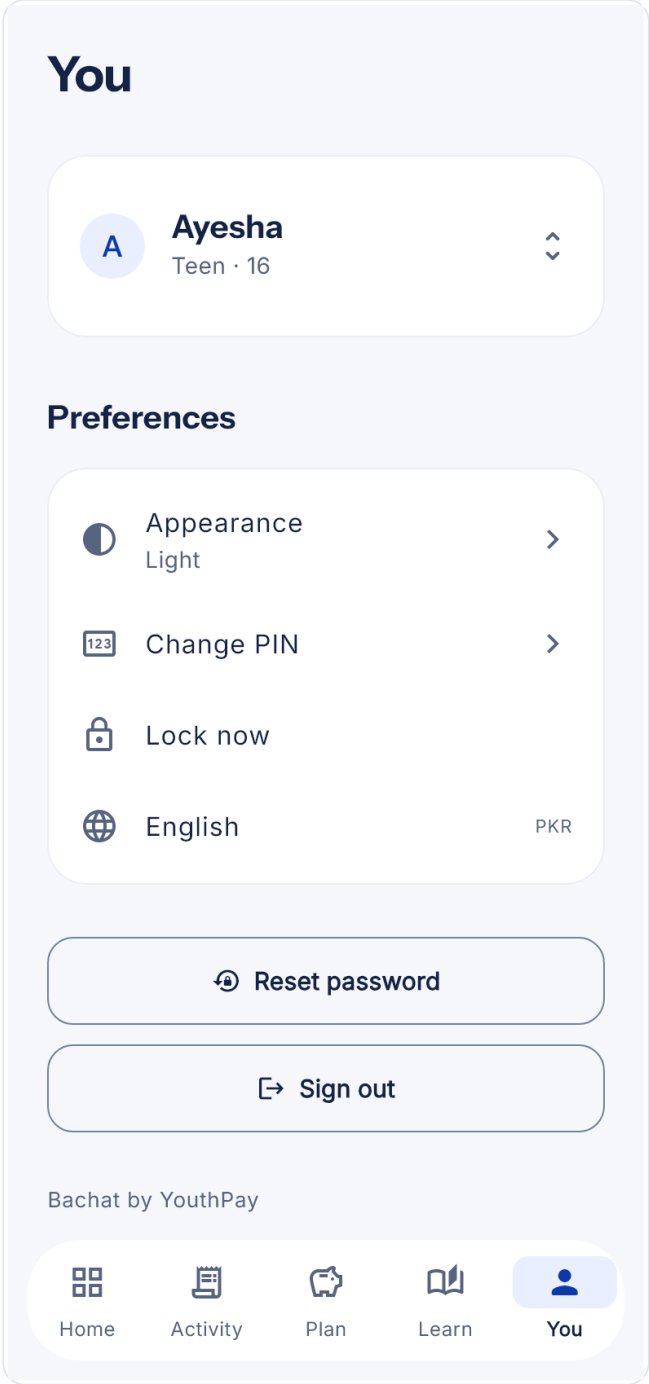

Return safely and manage preferences

Account protection and personal appearance are available in the app.

Unlock Bachat

The PIN gate protects the app when it is reopened. Forgotten-PIN recovery returns to account sign-in.

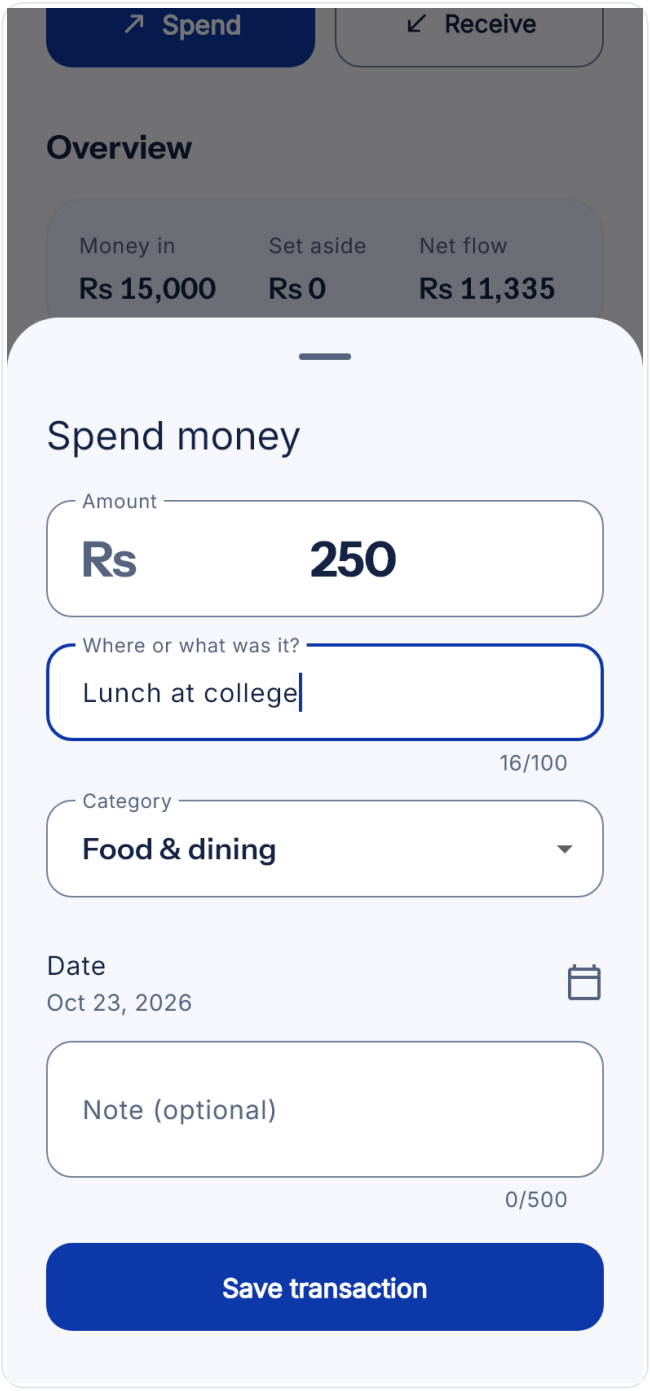

You

The authenticated account view: profile, appearance and device PIN controls. The account itself is an isolated fixture.

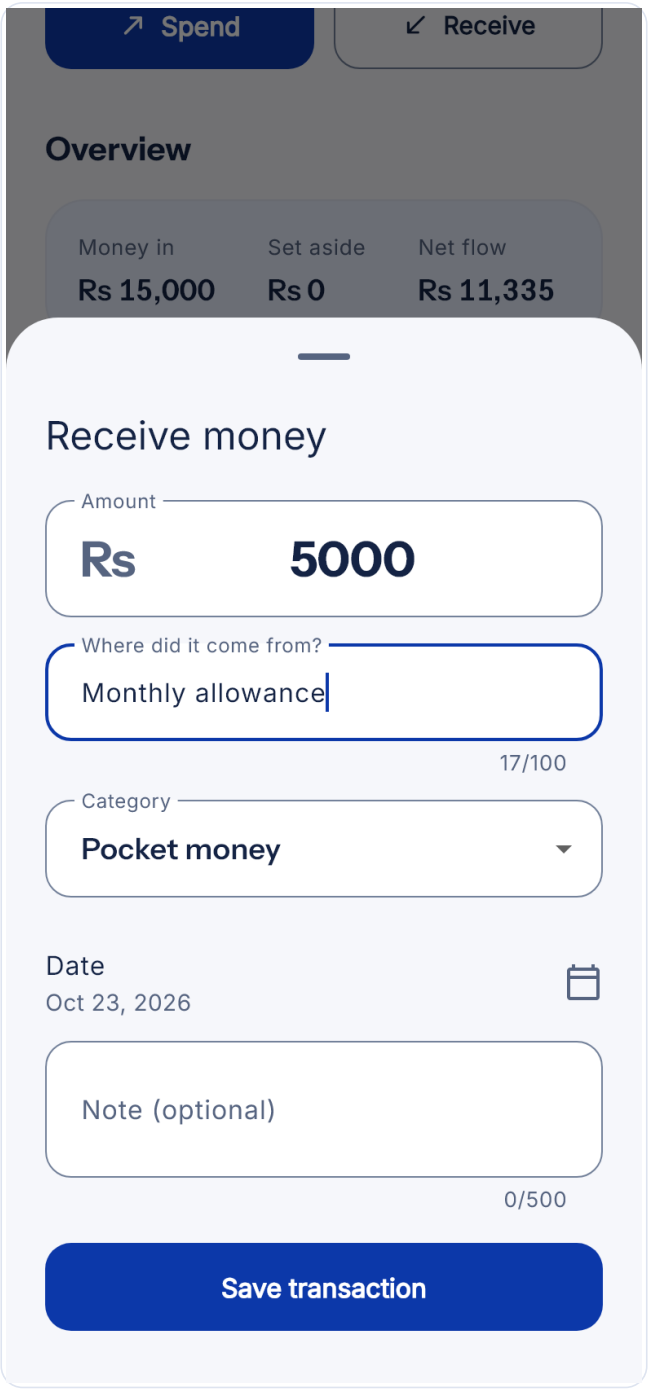

Record spending and money received

Separate forms keep categories relevant to the kind of entry.

Spend

Enter an amount, what the purchase was, a spending category, date and optional note.

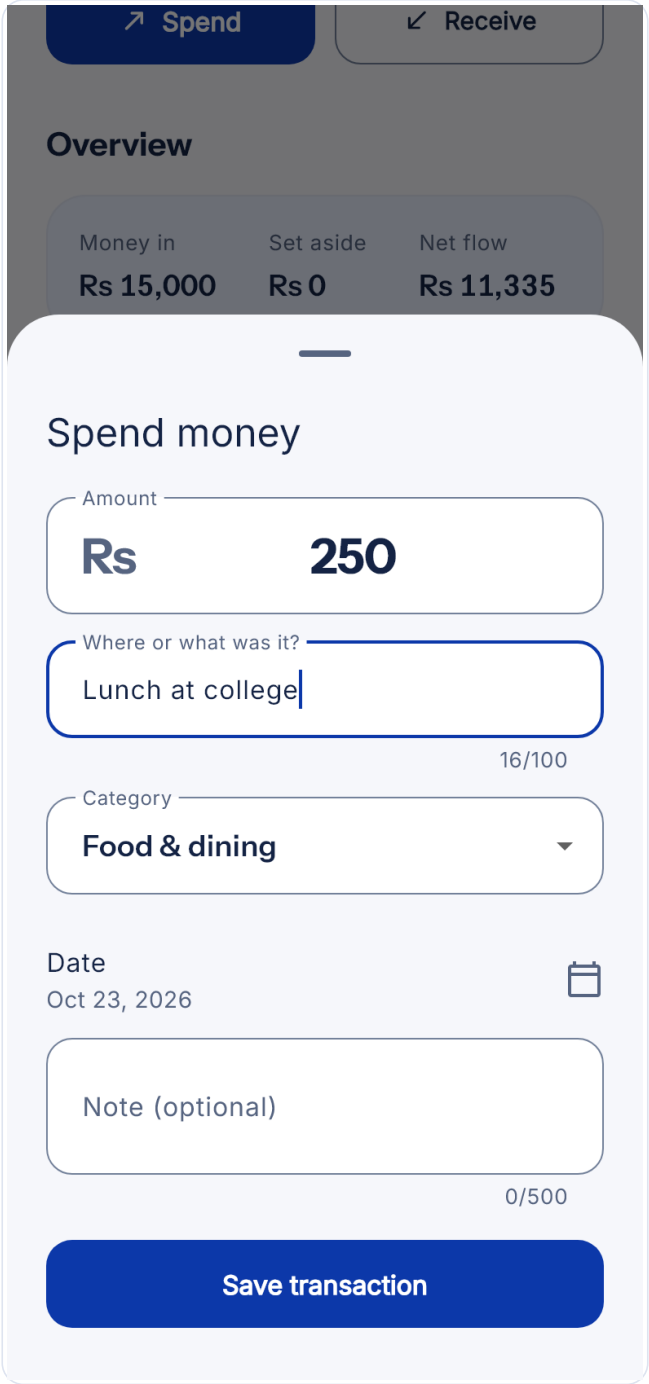

Receive

Record money received with income categories such as Pocket money and Gift.

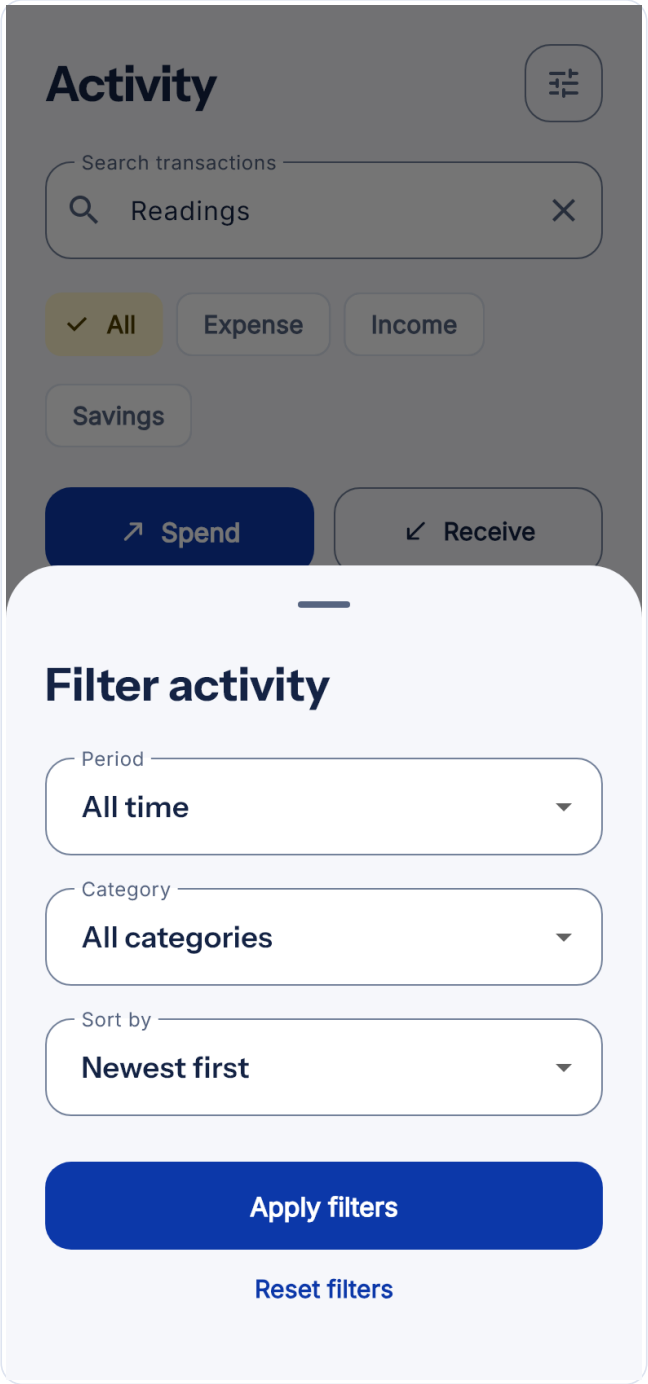

Finish an entry and narrow the list

Native sheets keep related tasks together.

Transaction details

A further view of the same expense sheet shows its date, optional note and Save transaction action.

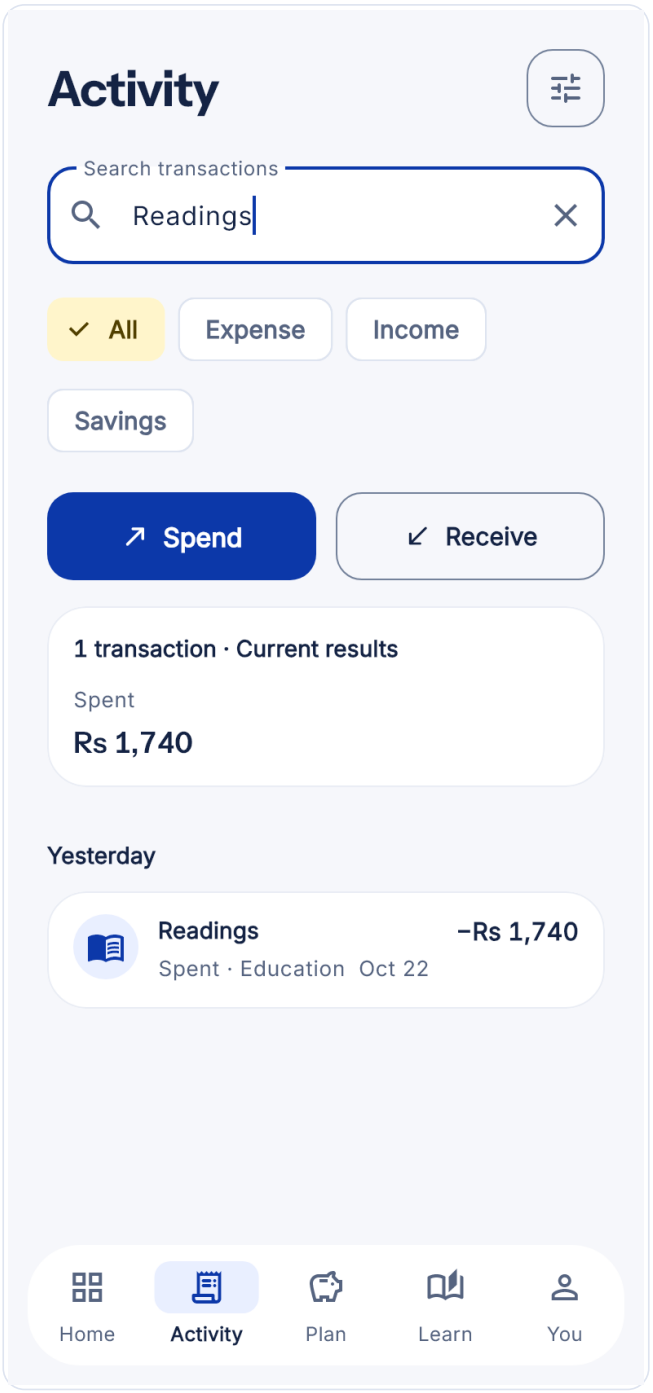

Filter activity

Choose a period, category and sort order; then apply or reset the filters.

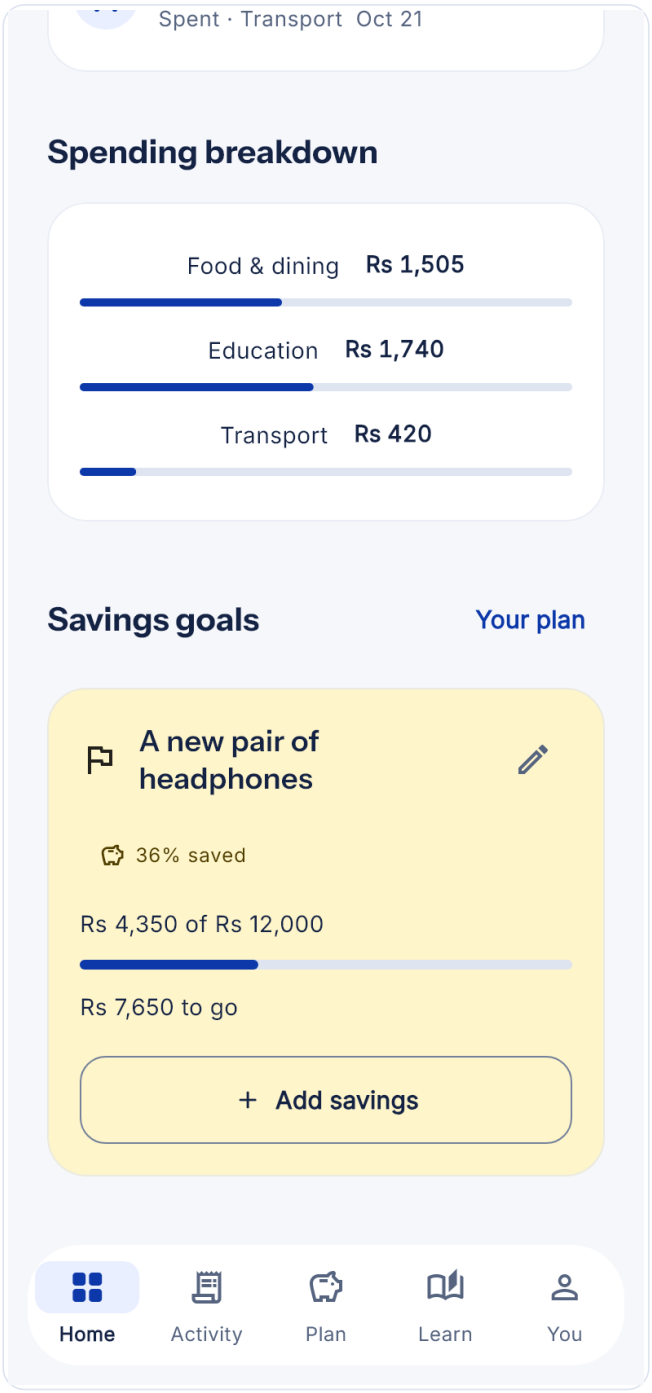

See the scope of your spending

Search results and category context use the same recorded transactions.

Search results

A search for Readings narrows both the list and its count and spending total.

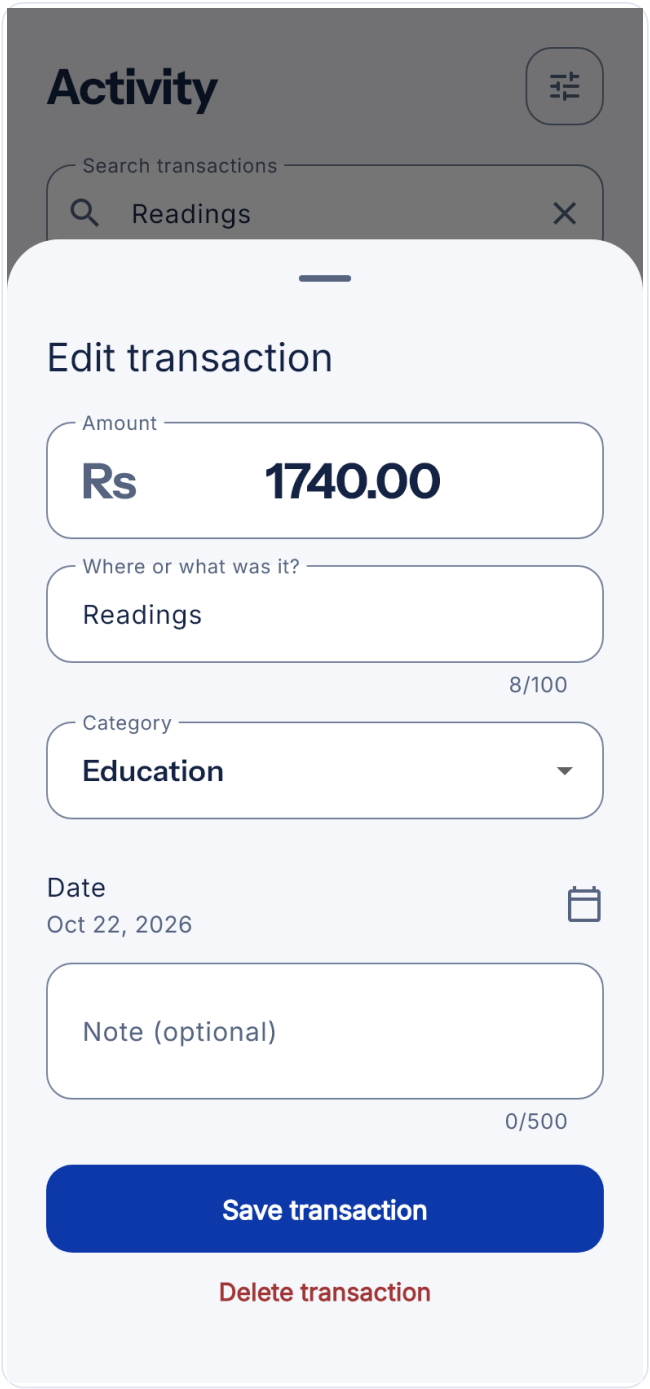

Home, scrolled

The lower Home view contains category analysis and the route into savings goals.

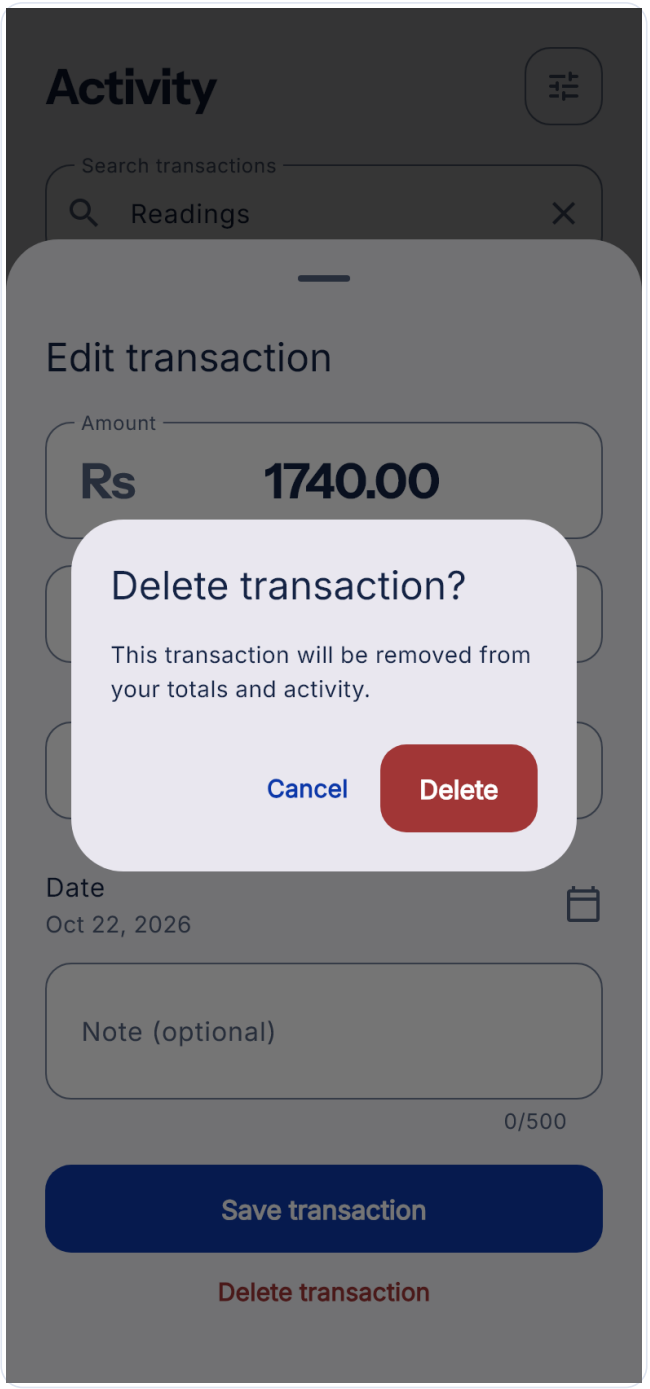

Edit an entry with care

Existing records can be corrected, and deletion requires confirmation.

Edit a transaction

Review and change the recorded details. This scrolled view includes the save and delete actions.

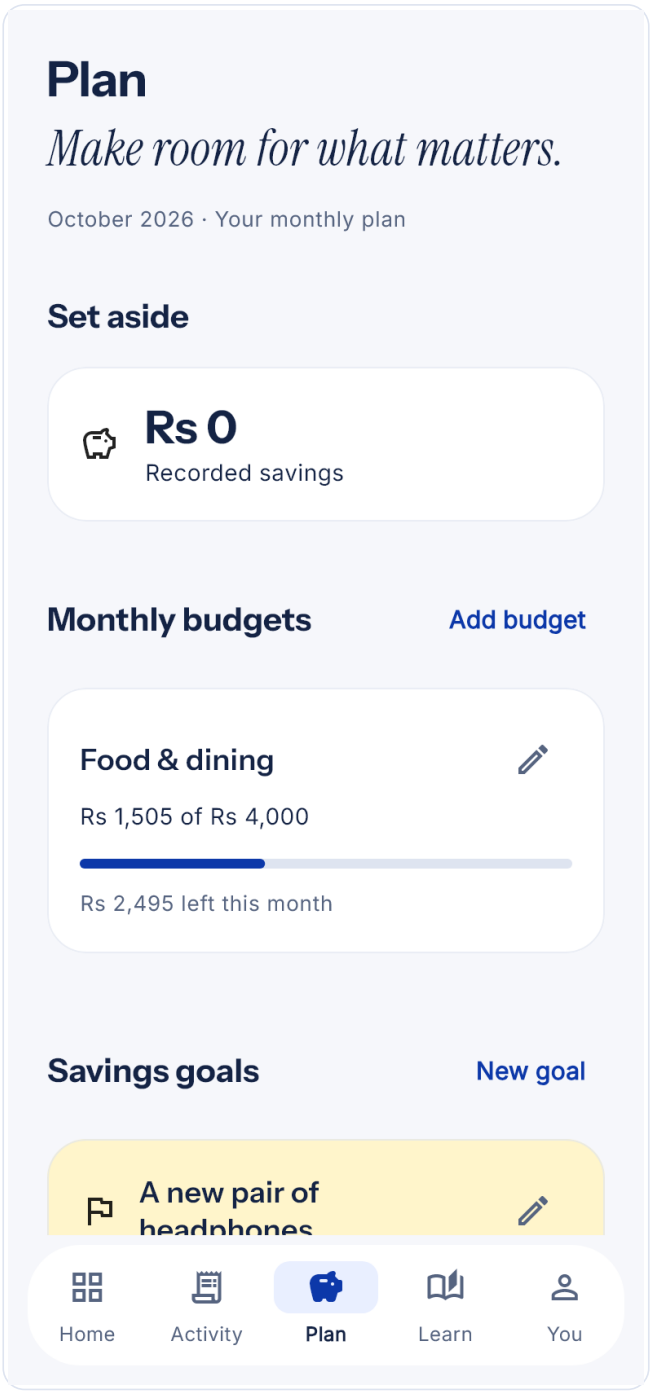

Confirm deletion

Deletion has a clear label, distinct color and a confirmation explaining its effect on totals and activity.

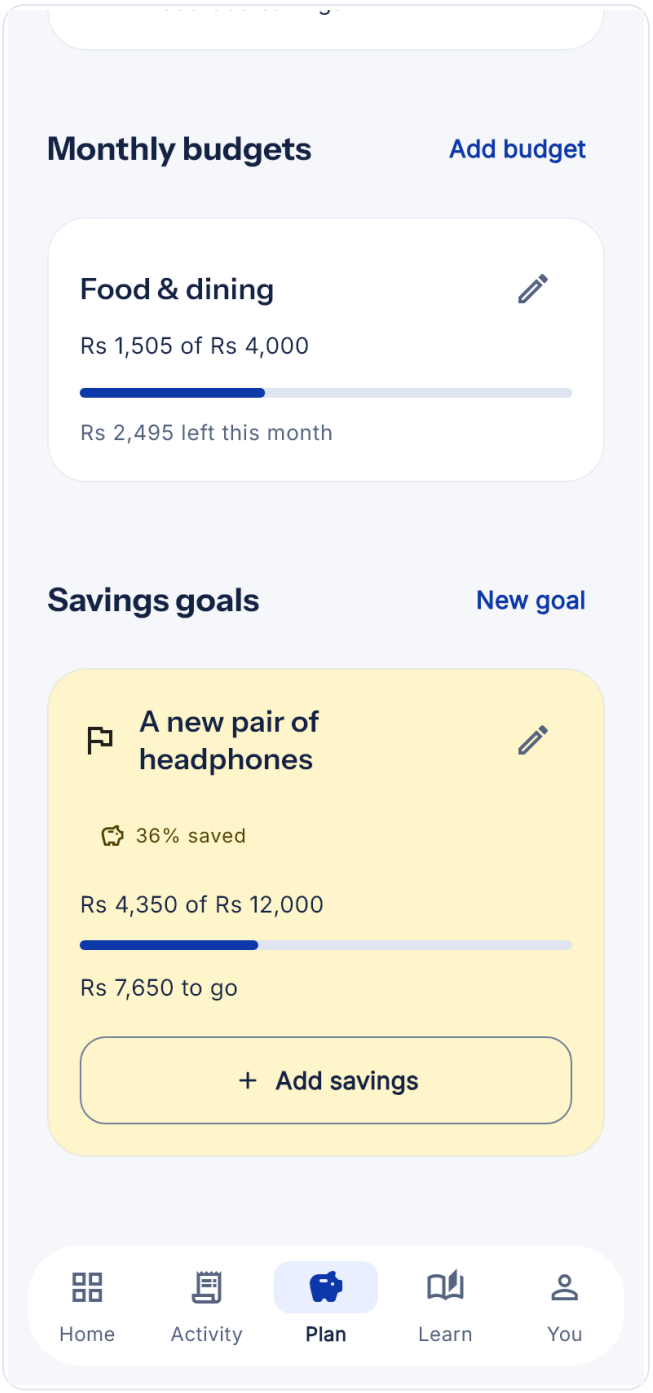

Plan the month and track a goal

Budgets and savings have distinct roles and clear progress.

Monthly plan

Review recorded savings and category budget limits for the current month.

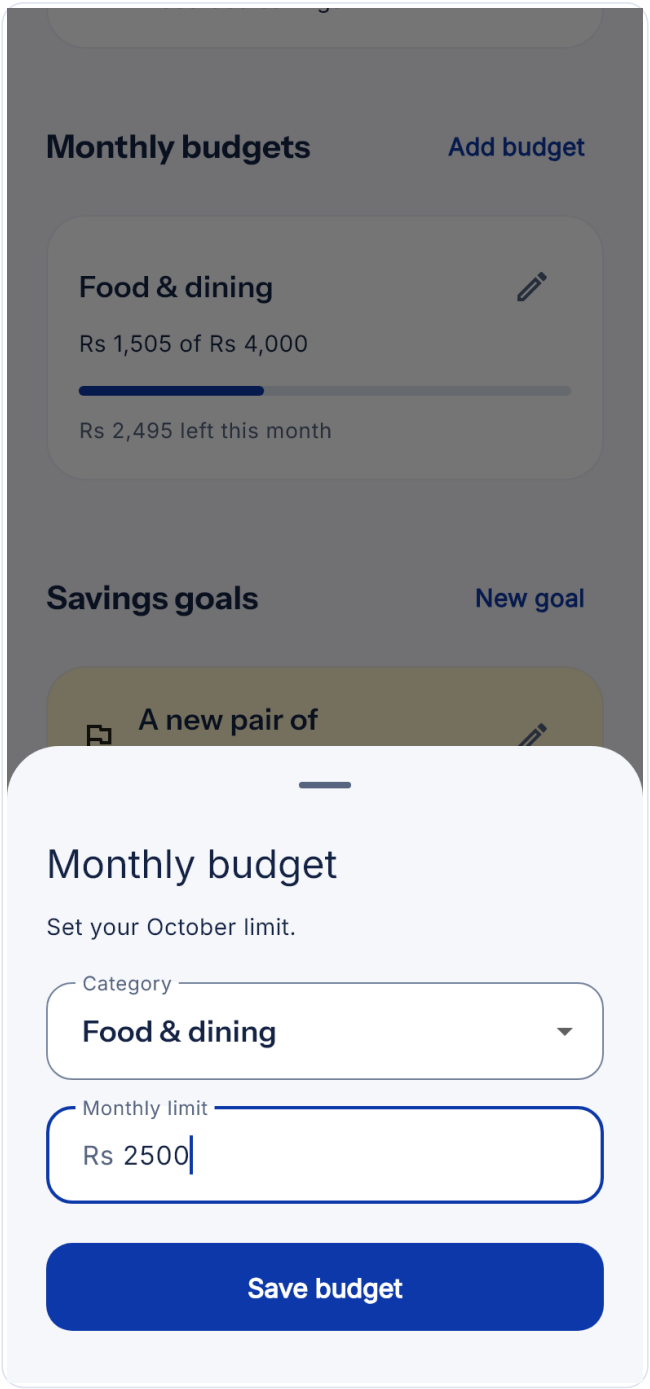

Plan, scrolled

The goal shows its saved amount, target, percentage, remaining amount and Add savings action.

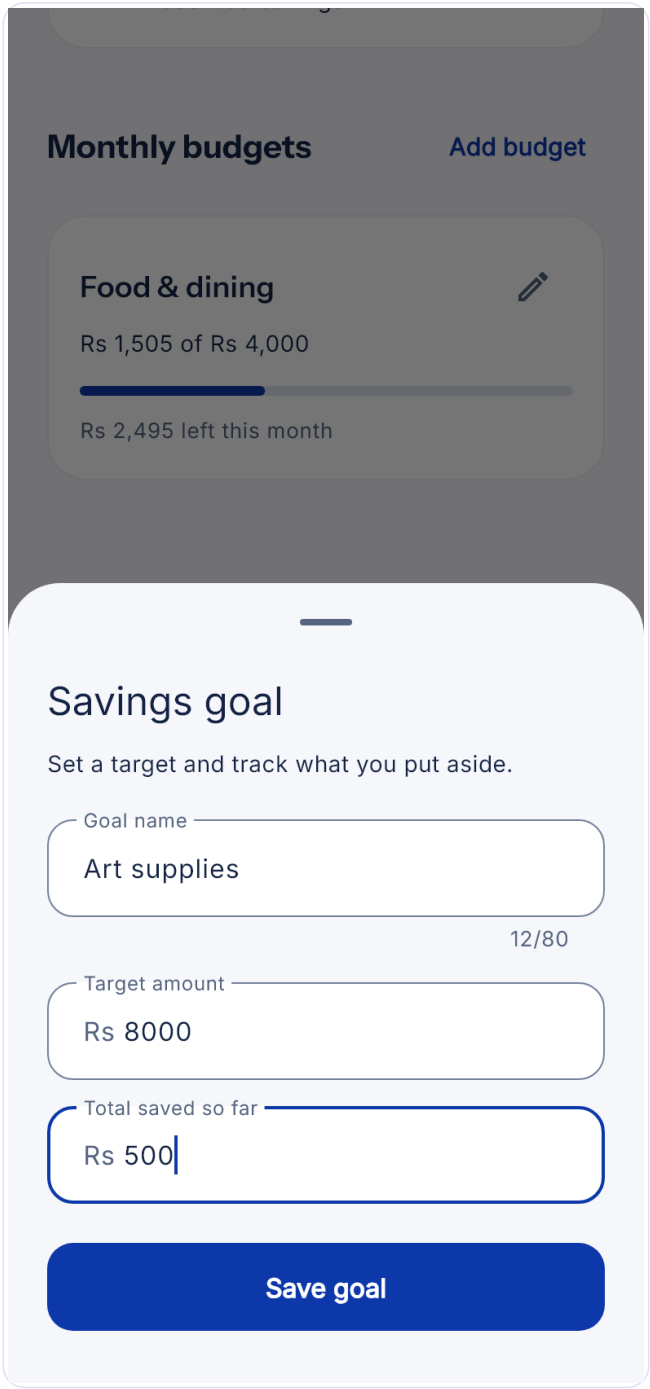

Set a limit. Give savings a purpose.

Existing forms let you start small and update the plan later.

Monthly budget

Choose a spending category and set a limit in Pakistani rupees.

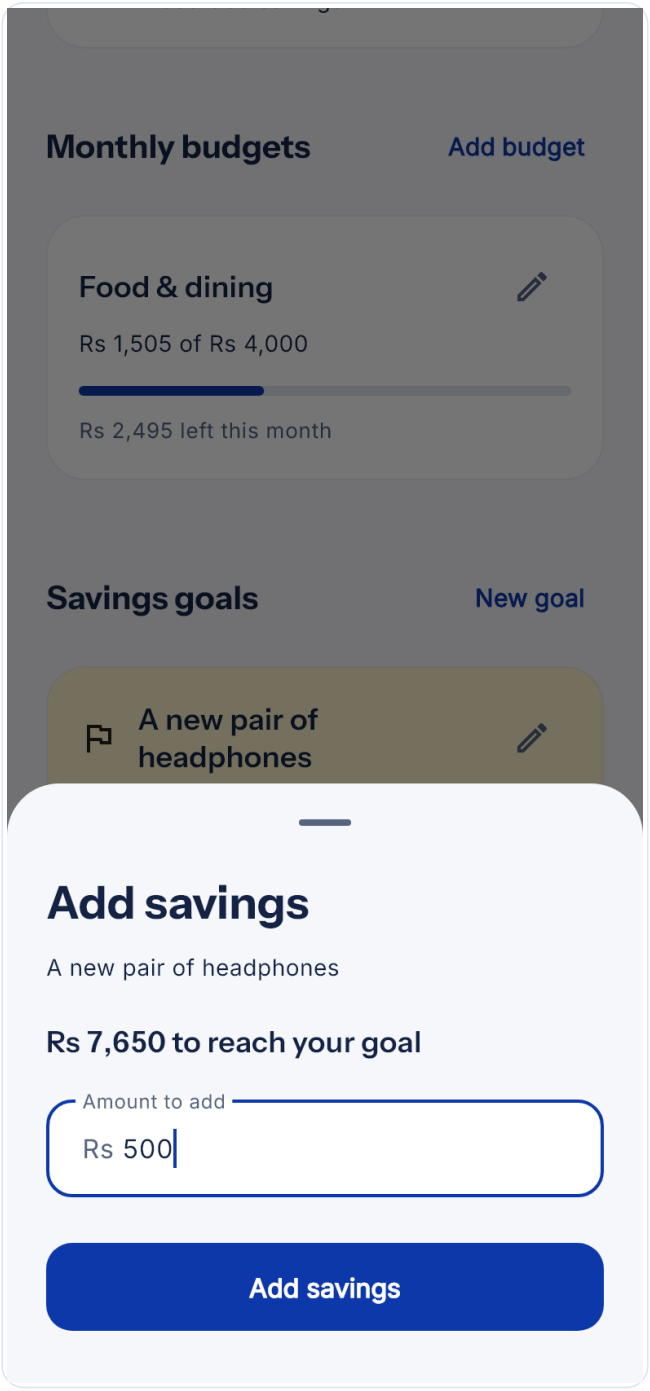

Savings goal

Give the goal a name, target amount and total already saved.

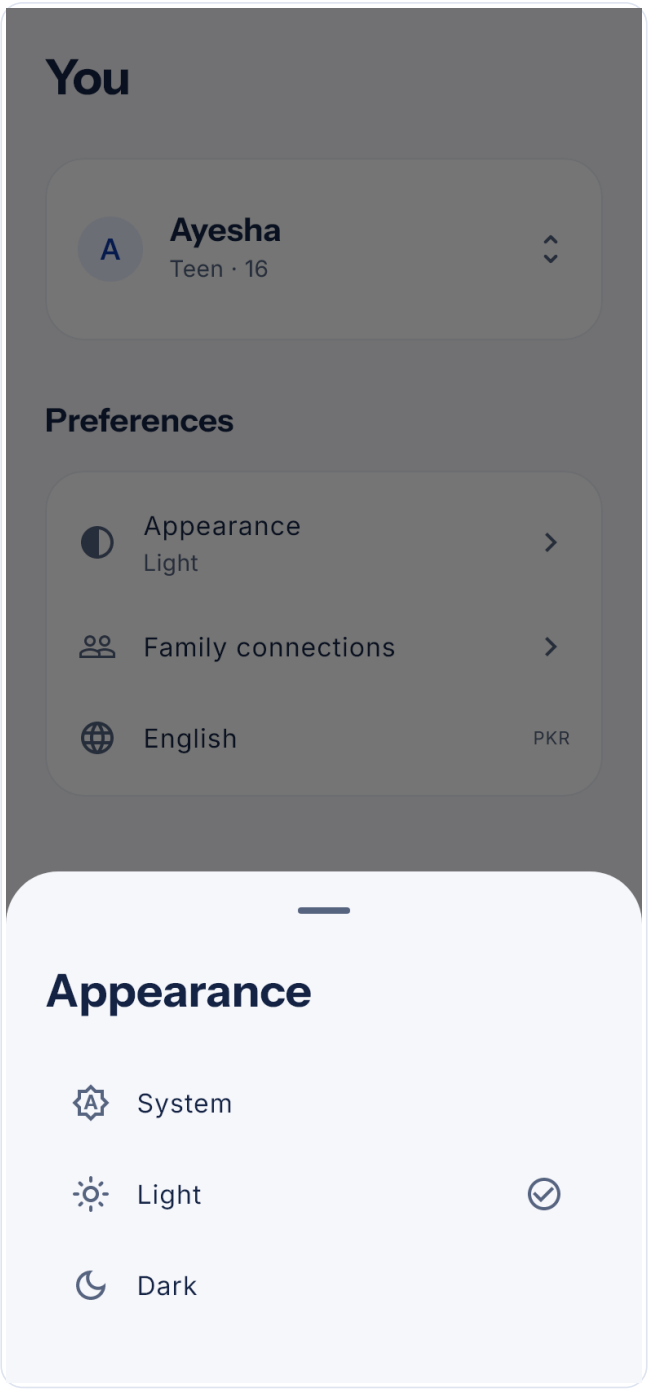

Add progress and choose an appearance

Small, direct actions support repeated use.

Add savings

See what remains to reach the goal and record an addition. This does not transfer money.

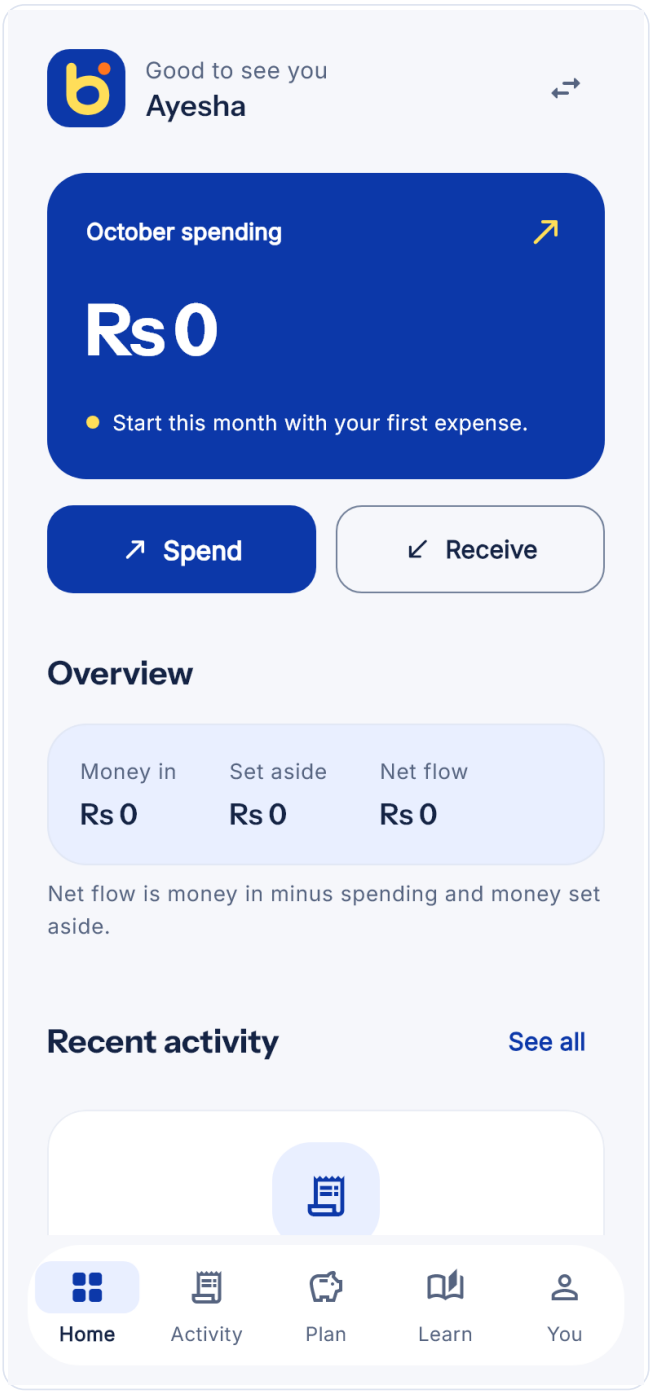

Appearance

Choose System, Light or Dark using native selection controls.

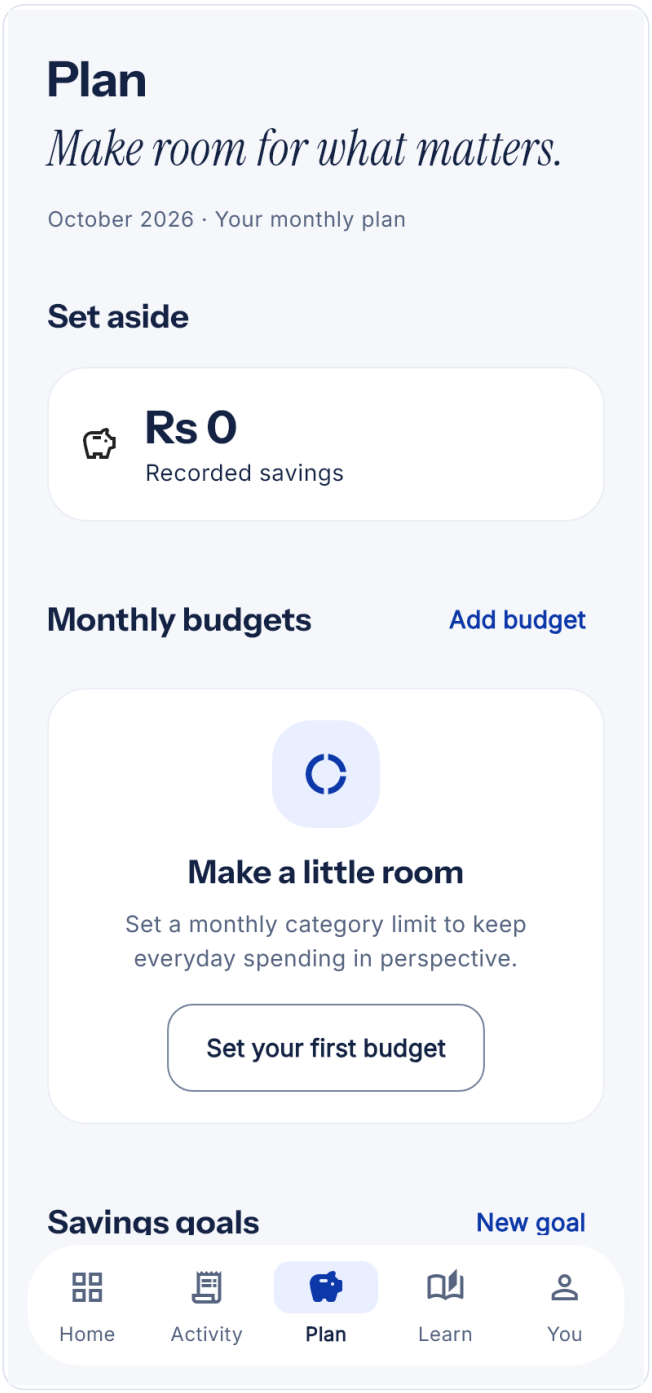

A useful start with no records

Empty states help new accounts take their first action.

Empty Home

The monthly summary starts at zero. Spend and Receive are ready without sample records.

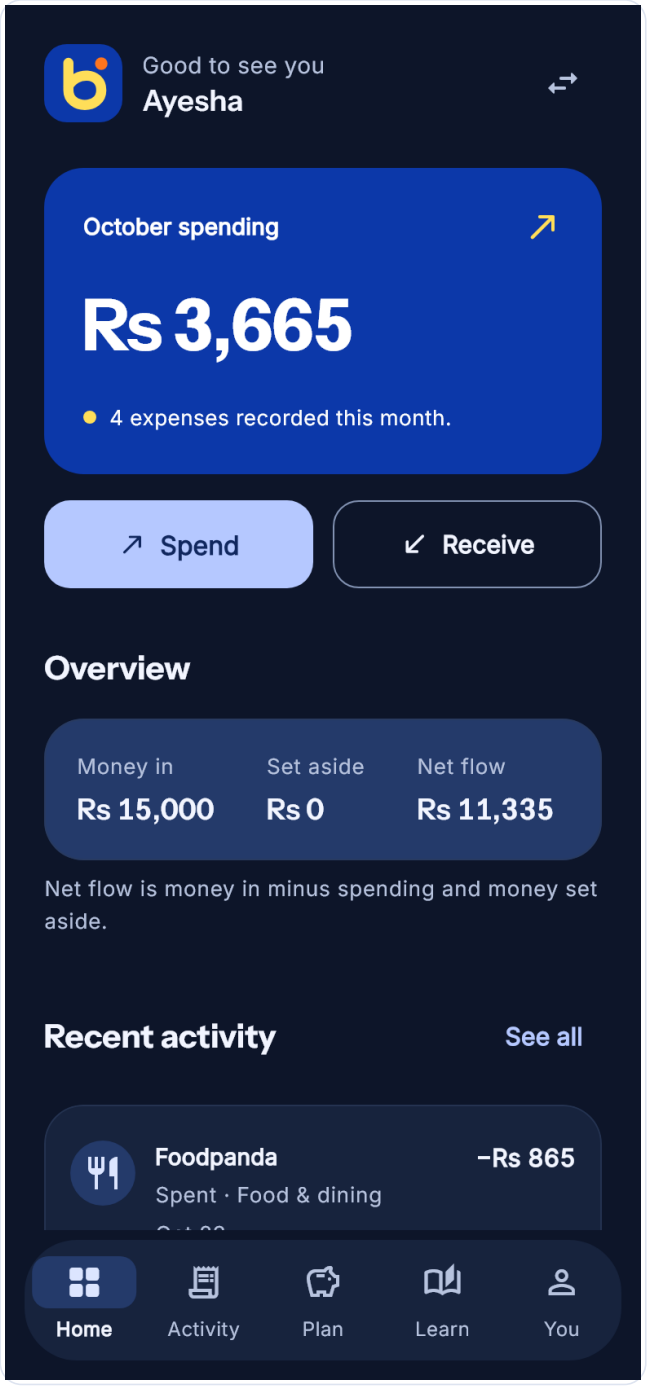

Empty Plan

A first-budget action appears with a short explanation; goals can be created further down.

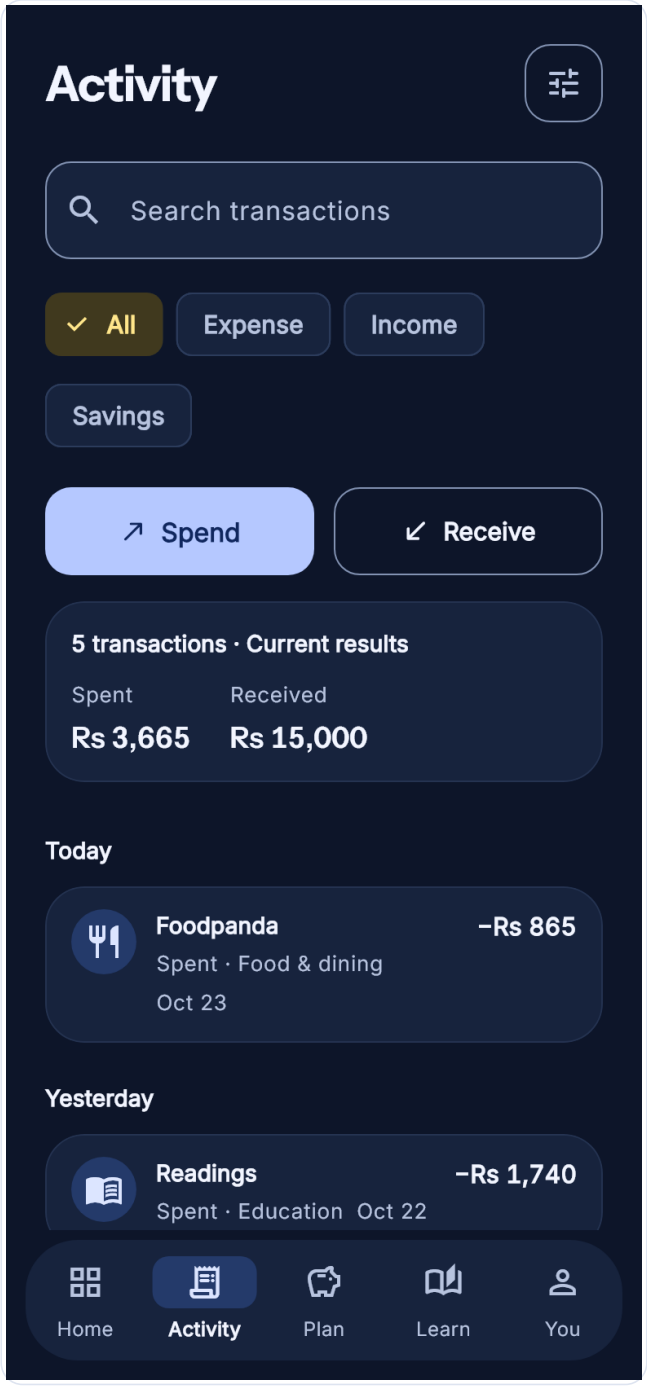

Dark appearance

Semantic surfaces and readable controls adapt to a darker canvas.

Home / Dark

The identity and spending summary stay consistent across appearances.

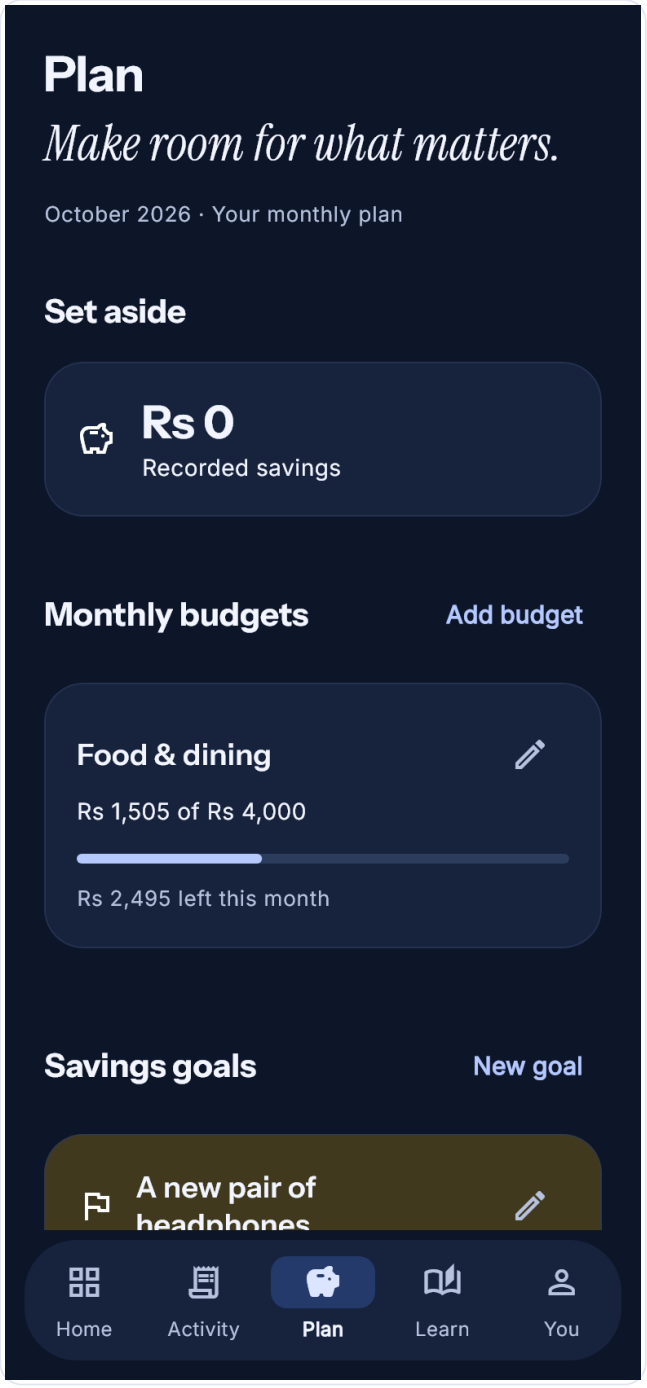

Activity / Dark

Result counts, money amounts and explicit direction labels remain readable.

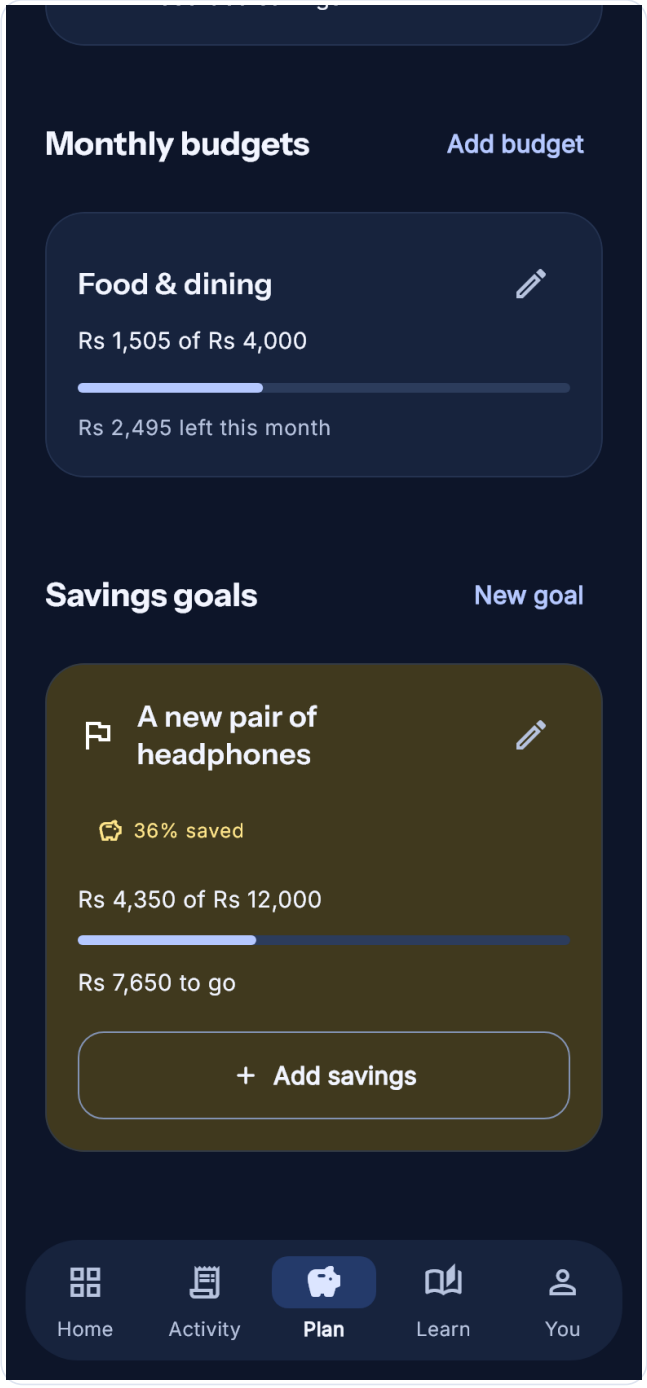

Planning after dark

Savings retain their warm highlight without relying on color alone.

Plan / Dark

Monthly budget values and progress use the dark theme's semantic colors.

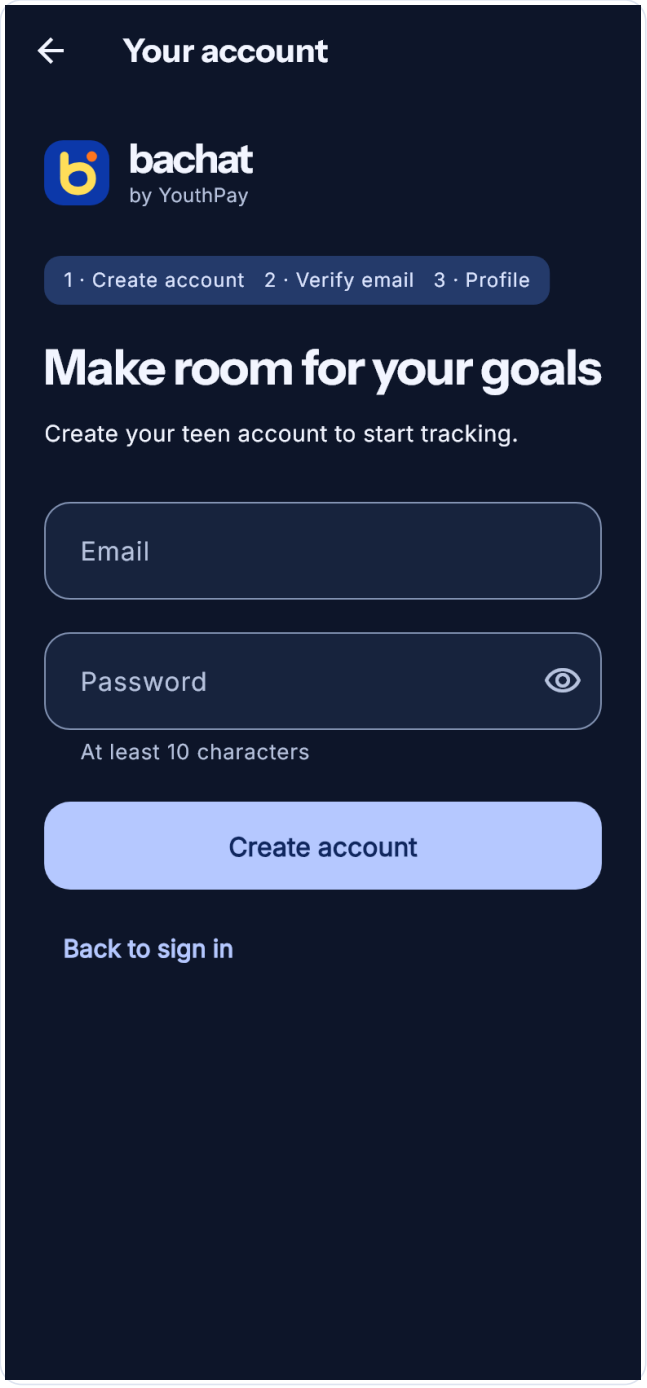

Goal / Dark

Saved amounts, completion percentage and the remaining target stay explicit.

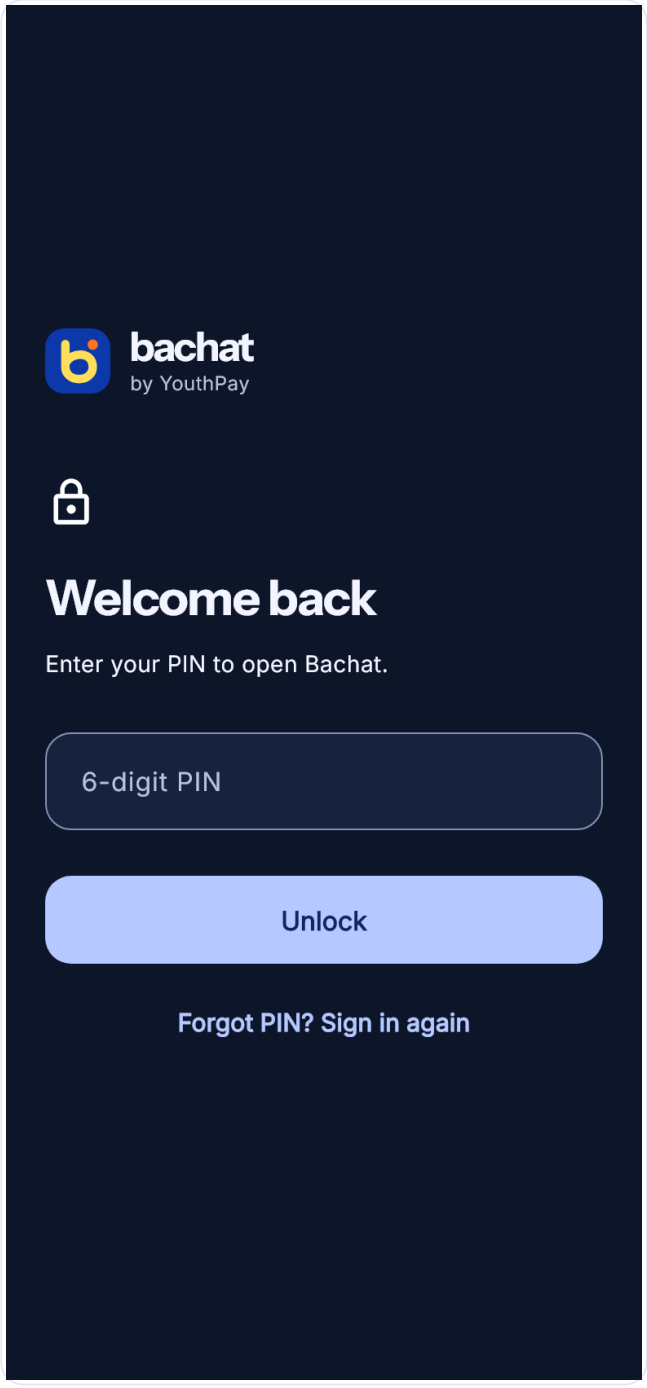

Account screens after dark

The account journey follows the selected appearance too.

Create account / Dark

The same labeled inputs and setup sequence on the dark canvas.

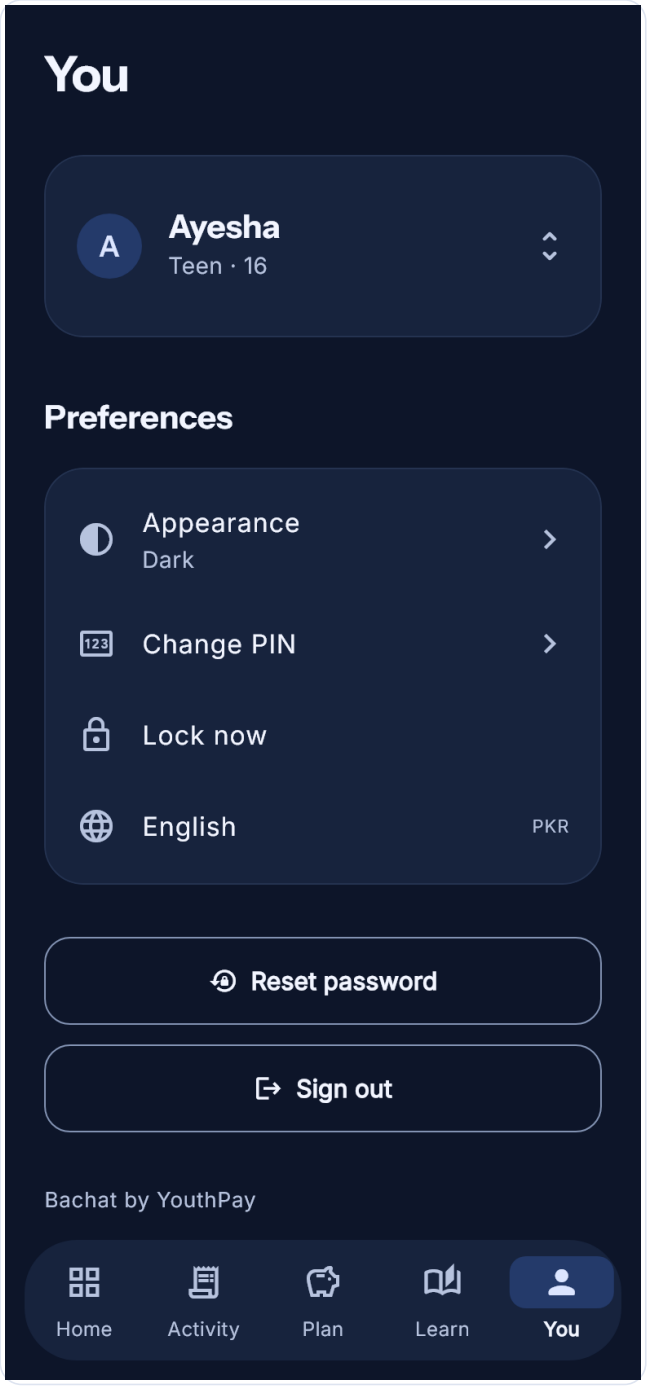

Unlock / Dark

The device privacy screen follows the app appearance.

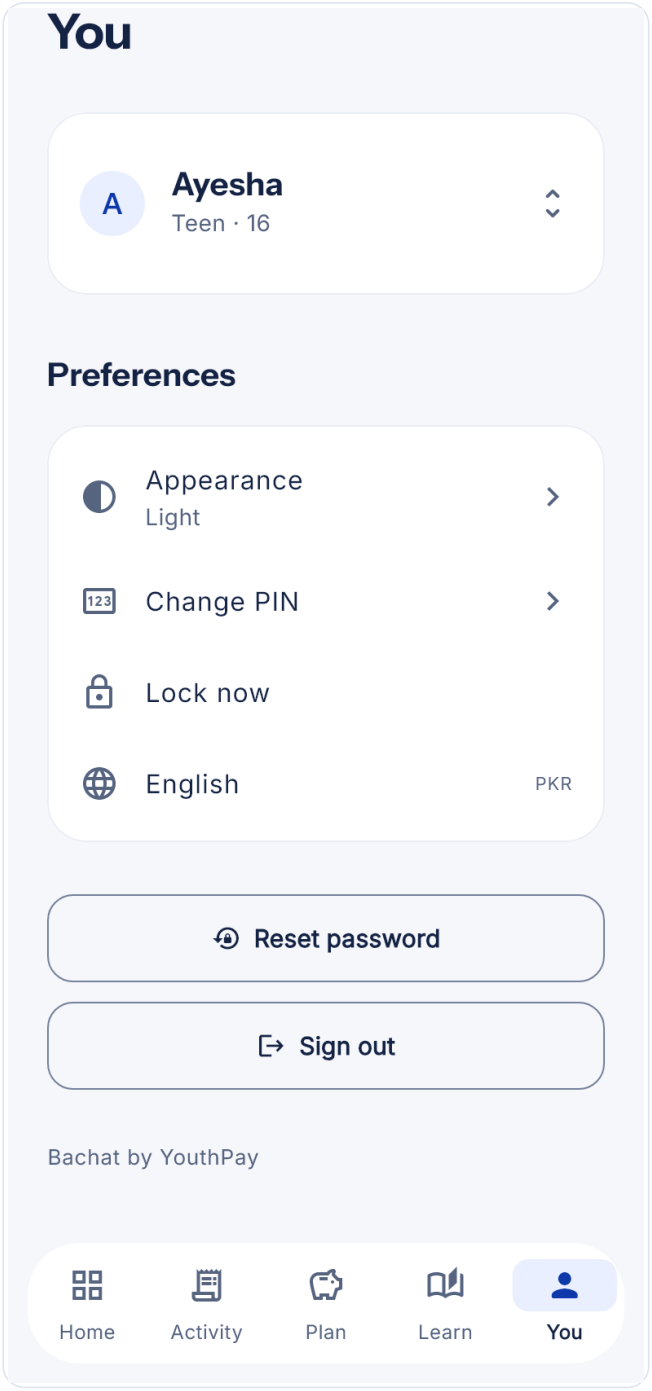

Device and account controls

The authenticated settings view uses an isolated account fixture.

You / Dark

Appearance, Change PIN and Lock now are available for a signed-in teen account.

Account actions, scrolled

Reset a password or sign out. Sign-out warns about unsynced records before discarding local changes.

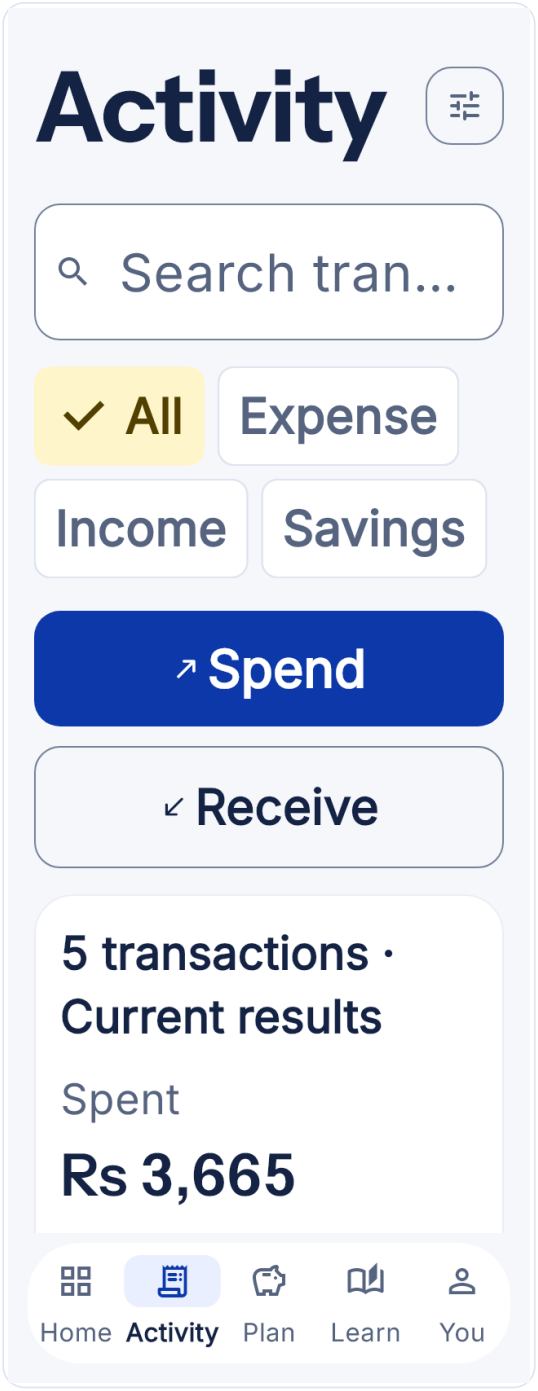

More room for larger text

320 logical pixels wide, with text scaled to 200 percent.

Home / Large text

Amounts and actions reflow; the page remains scrollable to reach the rest of the information.

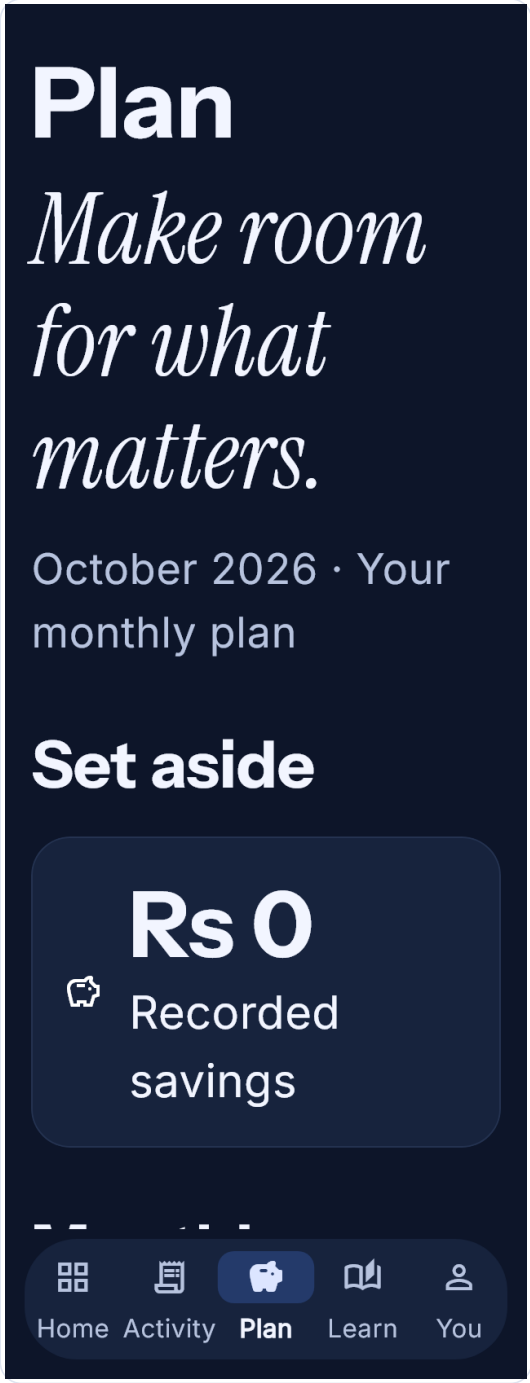

Activity / Large text

Search, filters and actions grow with the text rather than shrinking essential labels.

Large text in dark appearance

The same narrow-screen checks cover planning and onboarding.

Plan / Large text

The plan uses natural wrapping and vertical scrolling at larger text settings.

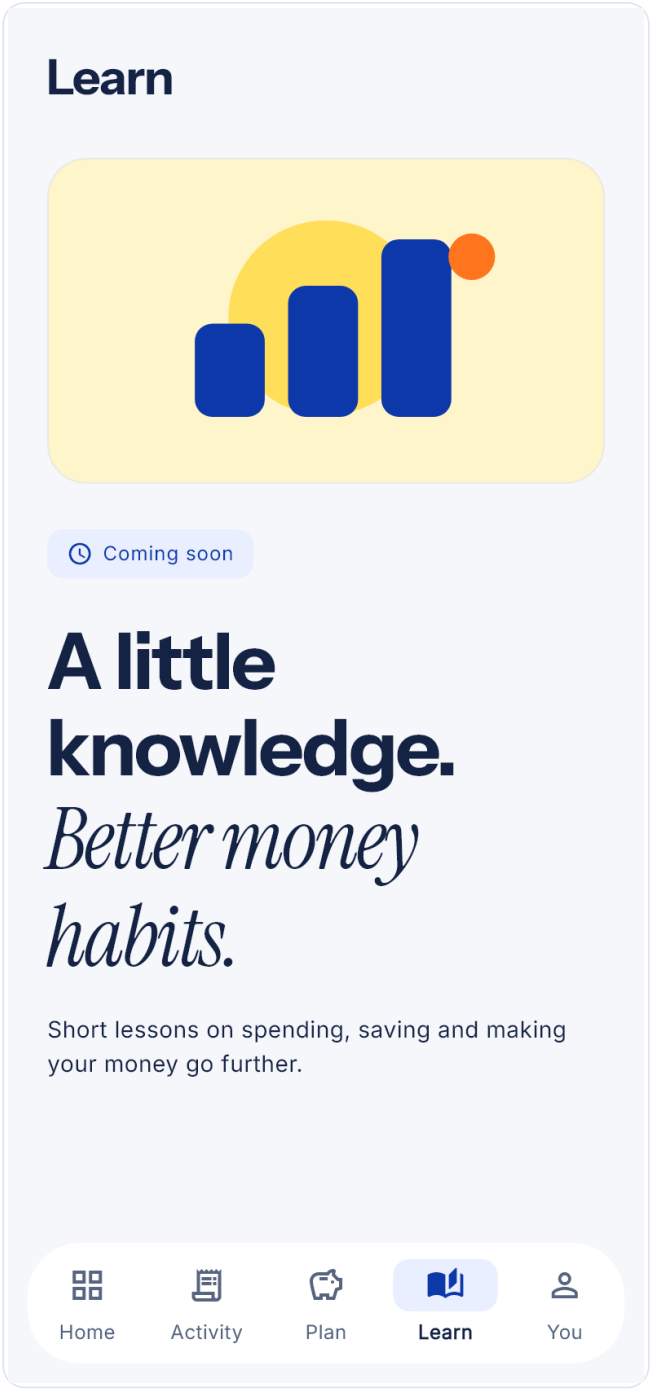

Introduction / Large text

Interactive example controls remain reachable. Reduced-motion settings disable the step transition.

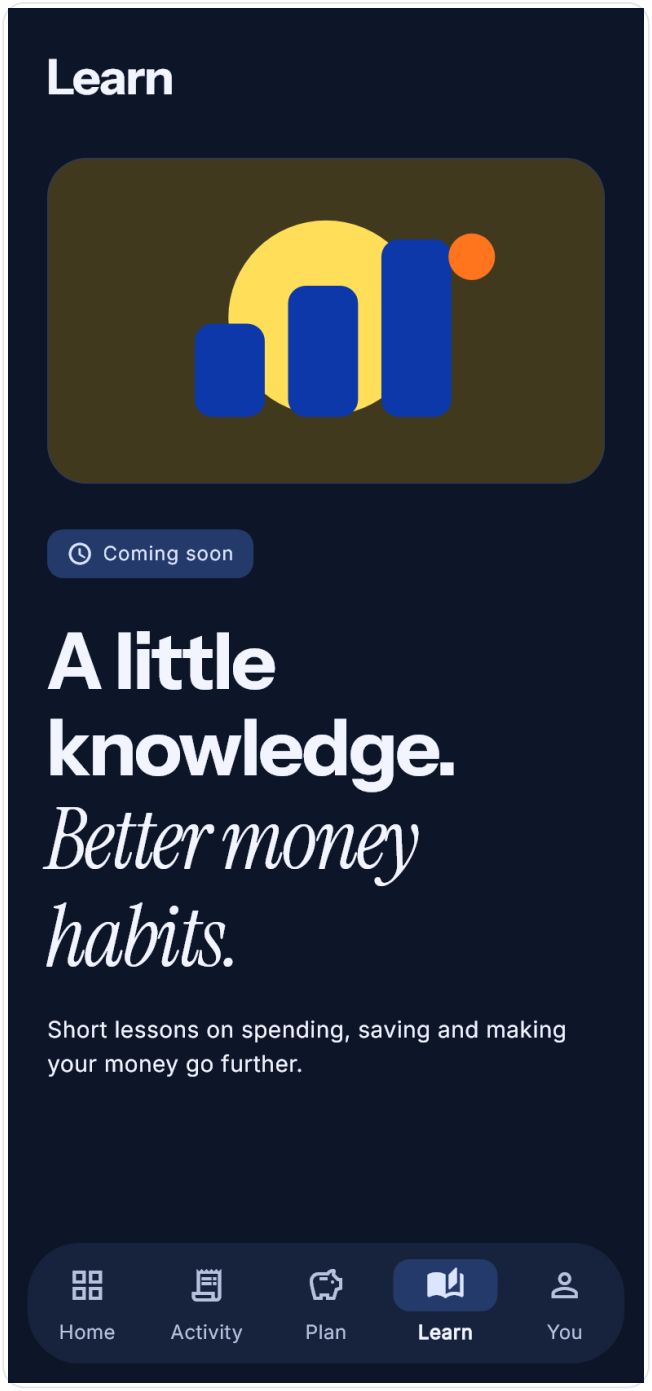

Learning is coming soon

The app describes unavailable features honestly.

Learn / Light

The learning area remains a coming-soon screen, rather than an unfinished action.

Learn / Dark

The same availability message and brand illustration in dark appearance.

What changed

• A three-step interactive introduction, reversible navigation, direct sign-in and Android system Back support.

• More useful Home and Activity layouts, recorded expense counts, readable dates and totals for filtered results.

• Contextual first-budget and first-goal actions, clearer form navigation, named progress and distinct delete controls.

• Consistent light/dark surfaces and native text scaling. Introduction animations respect reduced motion.

Verification

Application tests	71 tests passed with the standard Flutter runner.
Screen captures	6 rendering journeys passed; 78 fresh 2x PNG captures cover forms, account/PIN flows, both themes and narrow screens with 200% text.
Analysis and formatting	Flutter analyze: no issues. Dart formatting: 40 files unchanged.
Web	Release JavaScript web build passed. The existing secure-storage web plugin prevents Wasm compatibility.
Android	Debug APK build passed. This is a compile check, not physical-device or release-signing verification.
iOS	Device testing and signing require the team's macOS/Xcode setup and were not verified here.

Scope and remaining device checks

Teen accounts remain the current release scope. Parent onboarding and learning content remain unavailable. Bank/SMS/Gmail imports are future work. Physical Android/iOS use, iOS signing and assistive-technology checks are separate from the automated checks above.
