1 / Explore Bachat

For teens aged 13–18. Back and Skip let you move freely through the introduction.

Understand spending

Choose Food, Rides or Fun to explore category tracking. These are examples; no money records are created.

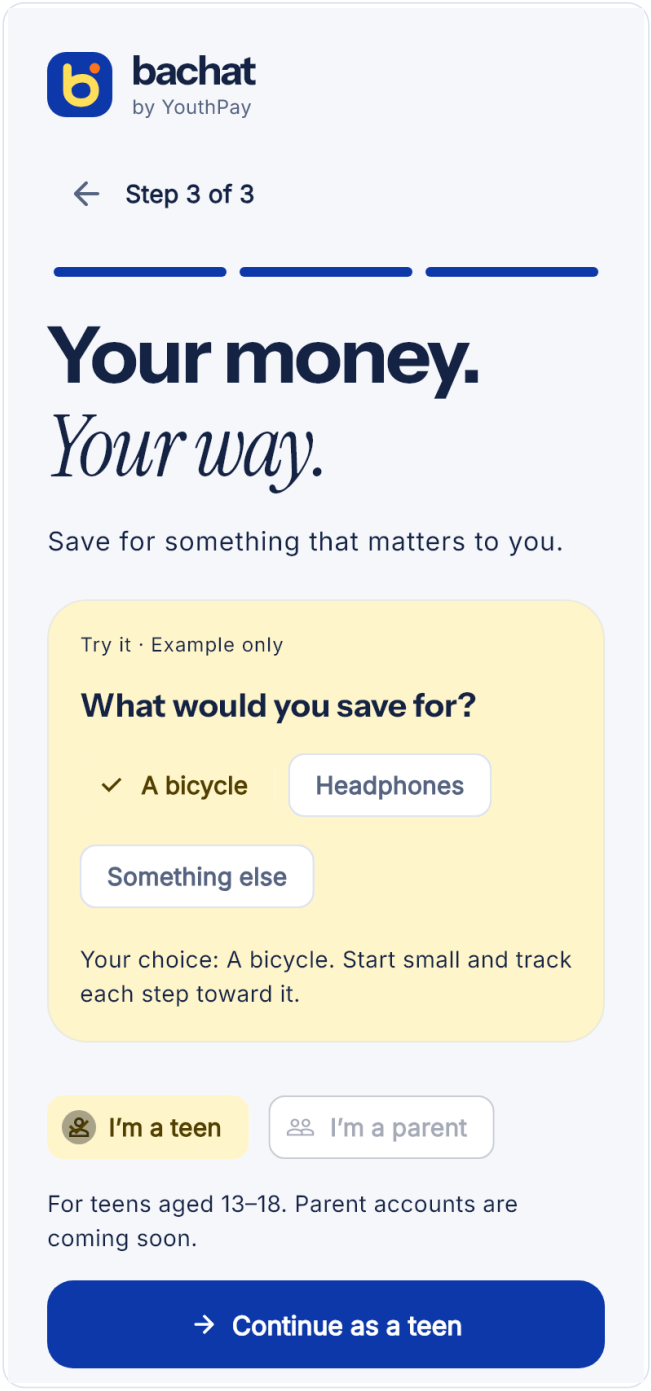

Try a monthly limit

Move the slider to explore a budget. Your real budgets are set after signing in.

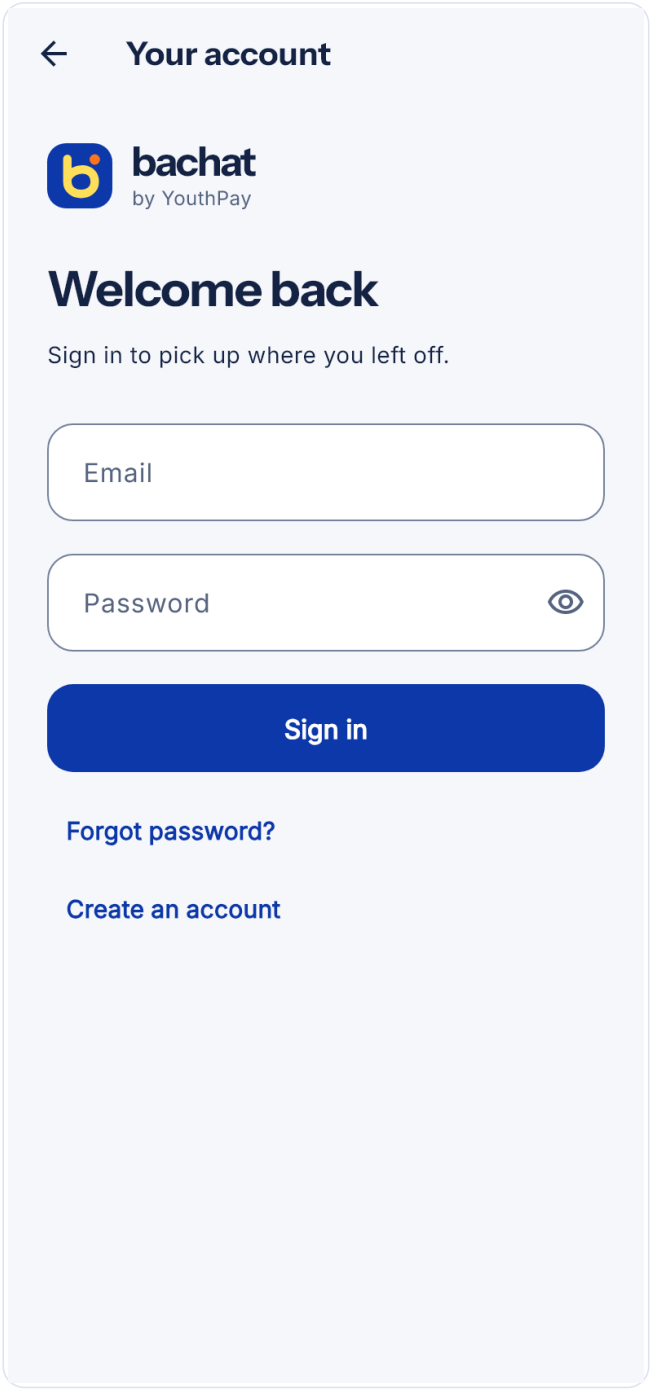

2 / Choose a goal and continue

New users create an account; returning users can sign in directly from any introduction step.

Choose a saving idea

Explore a goal, then select Continue as a teen. This example does not create a savings goal. Parent accounts are coming soon.

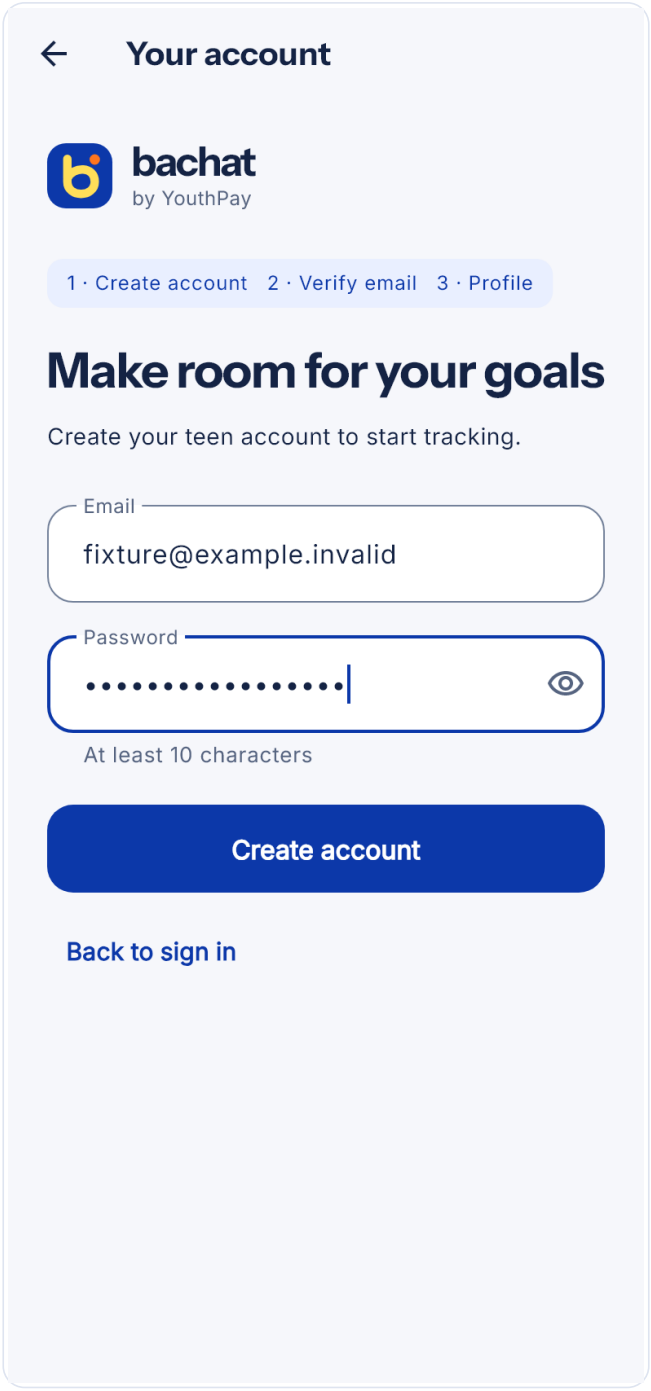

Open account creation

Select Create an account. Existing users enter their email and password; Forgot password opens recovery.

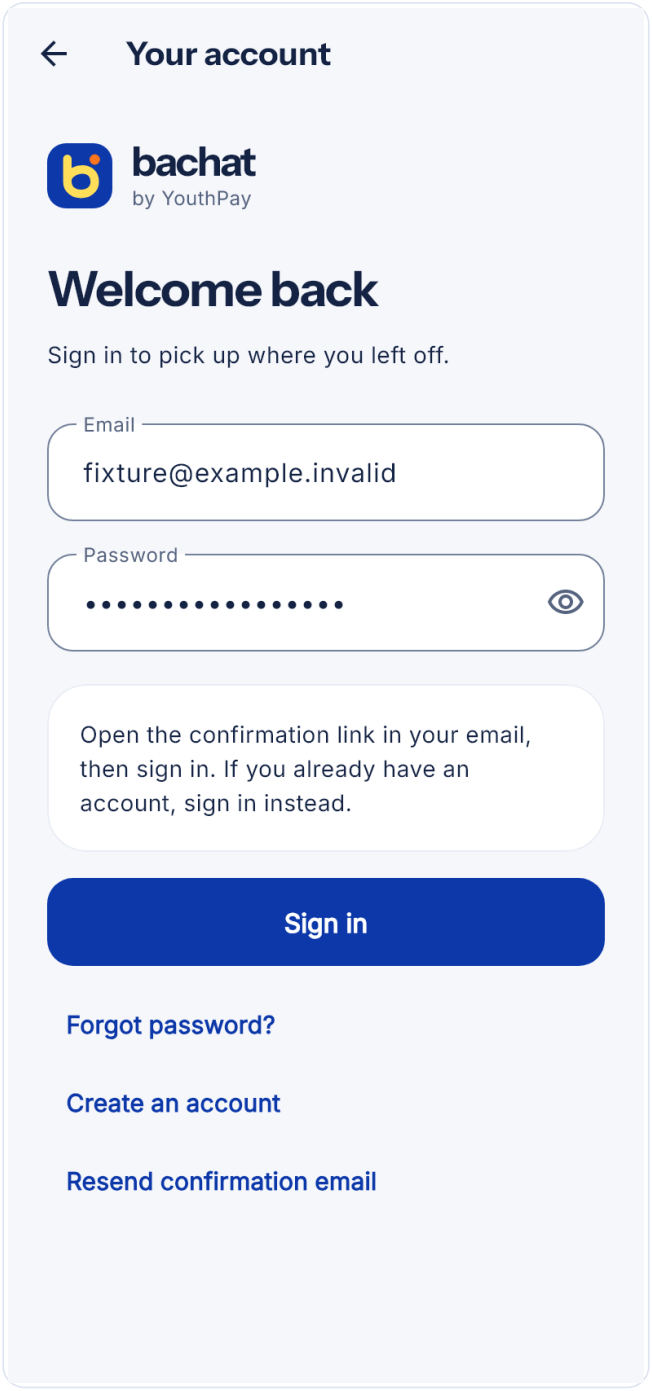

3 / Create and verify the account

Create an account, confirm the email outside Bachat, then return and sign in.

Create the account

Enter an email and a password of at least 10 characters, then select Create account.

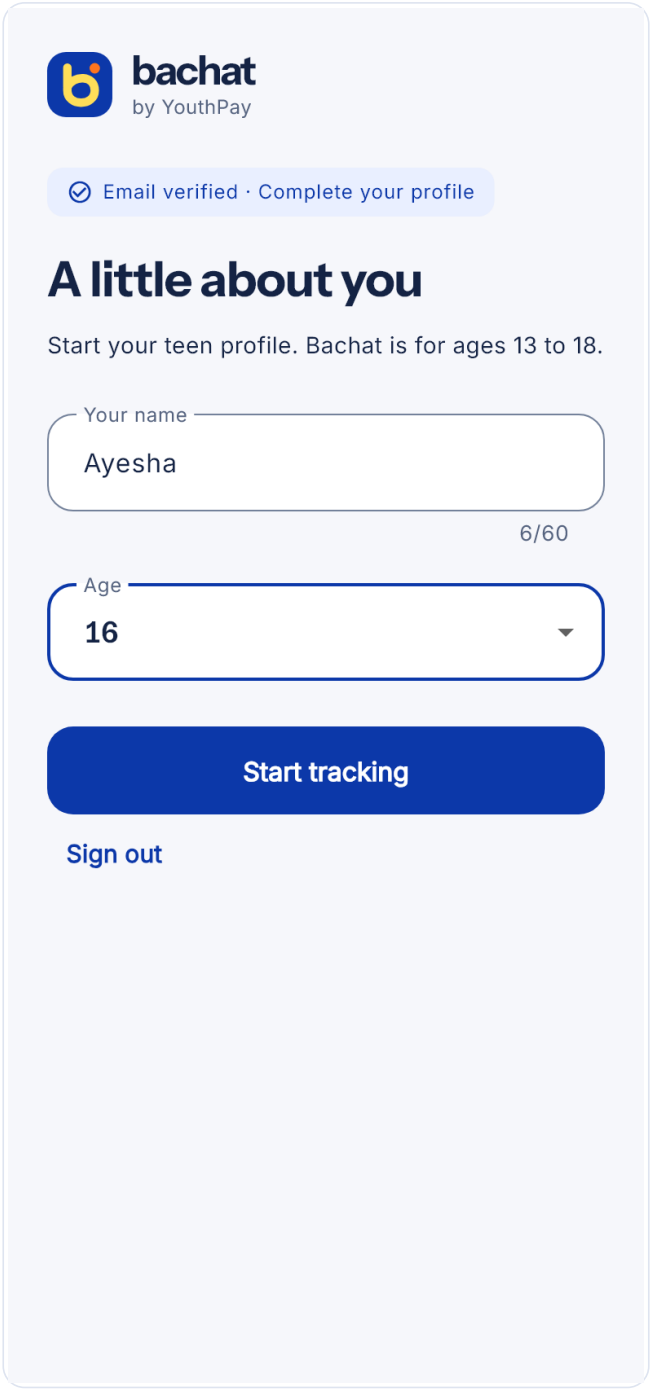

Verify the email

Open the confirmation link in your email app, then return and sign in. Use Resend confirmation email if needed. The email app is outside Bachat.

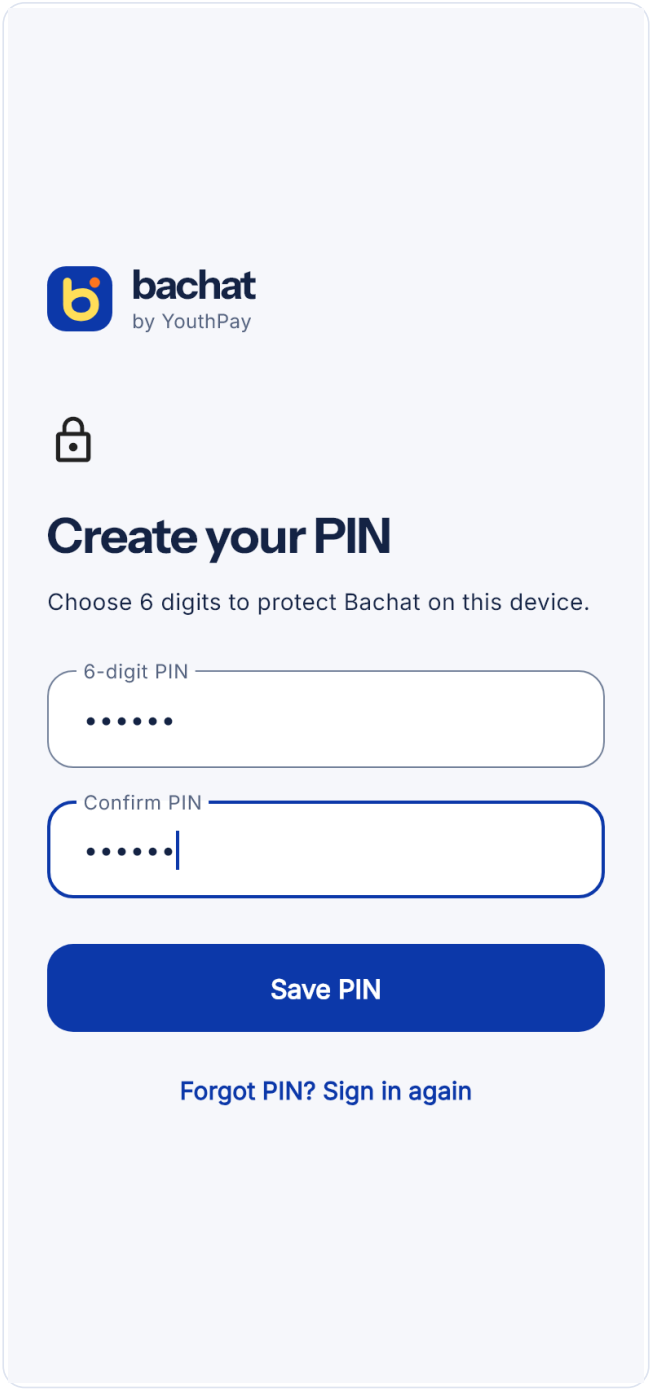

4 / Personalize and protect

After verification and sign-in, finish the profile and set up this device's PIN.

Complete the profile

Enter your name, choose your age (13–18), then select Start tracking.

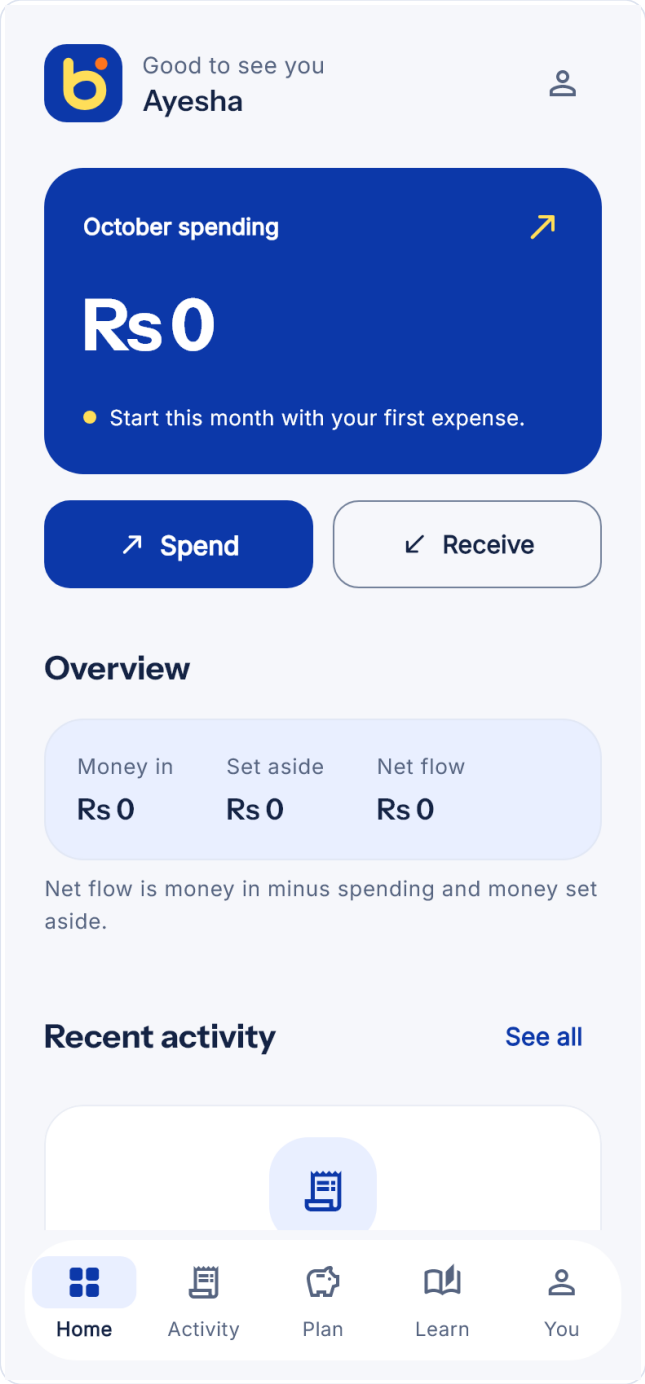

Create a device PIN

Choose six digits, enter them again to confirm, then select Save PIN. Each device has its own PIN.

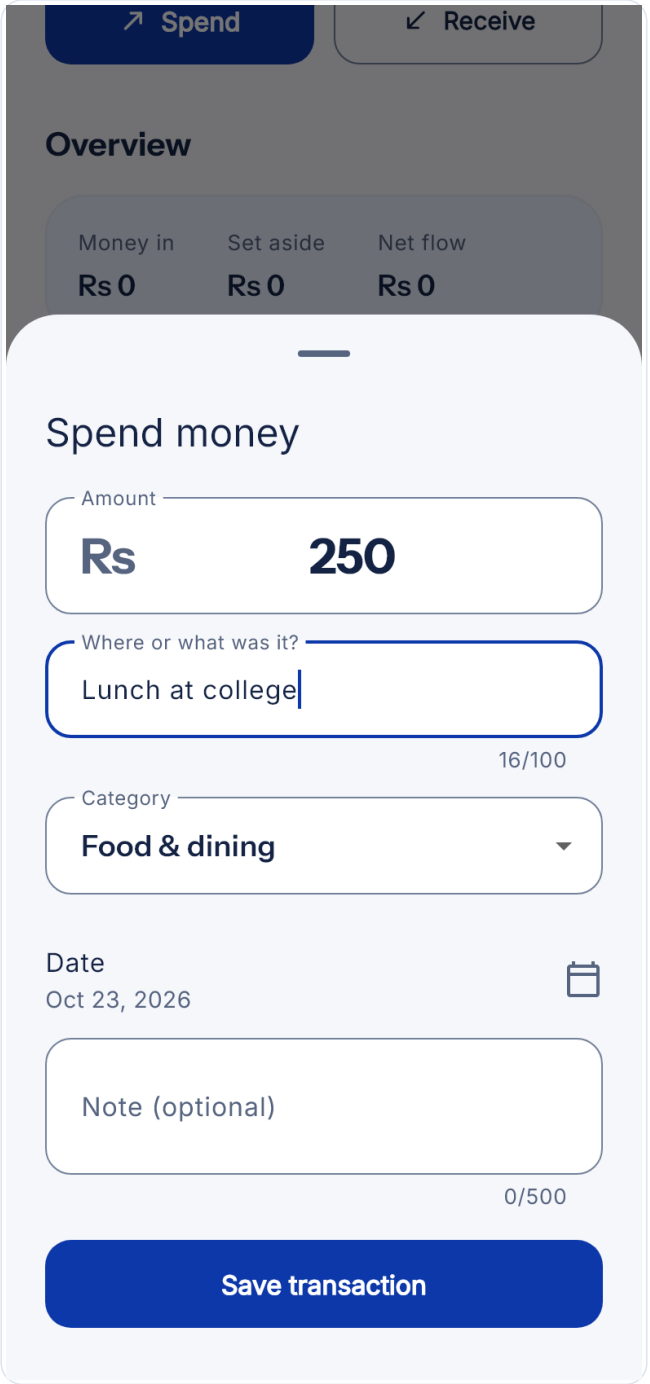

5 / Start tracking

Onboarding ends at your empty Home screen. The next step is optional: record a first expense.

Onboarding complete

A new account starts with zero spending and no sample records. Choose Spend or Receive when you are ready.

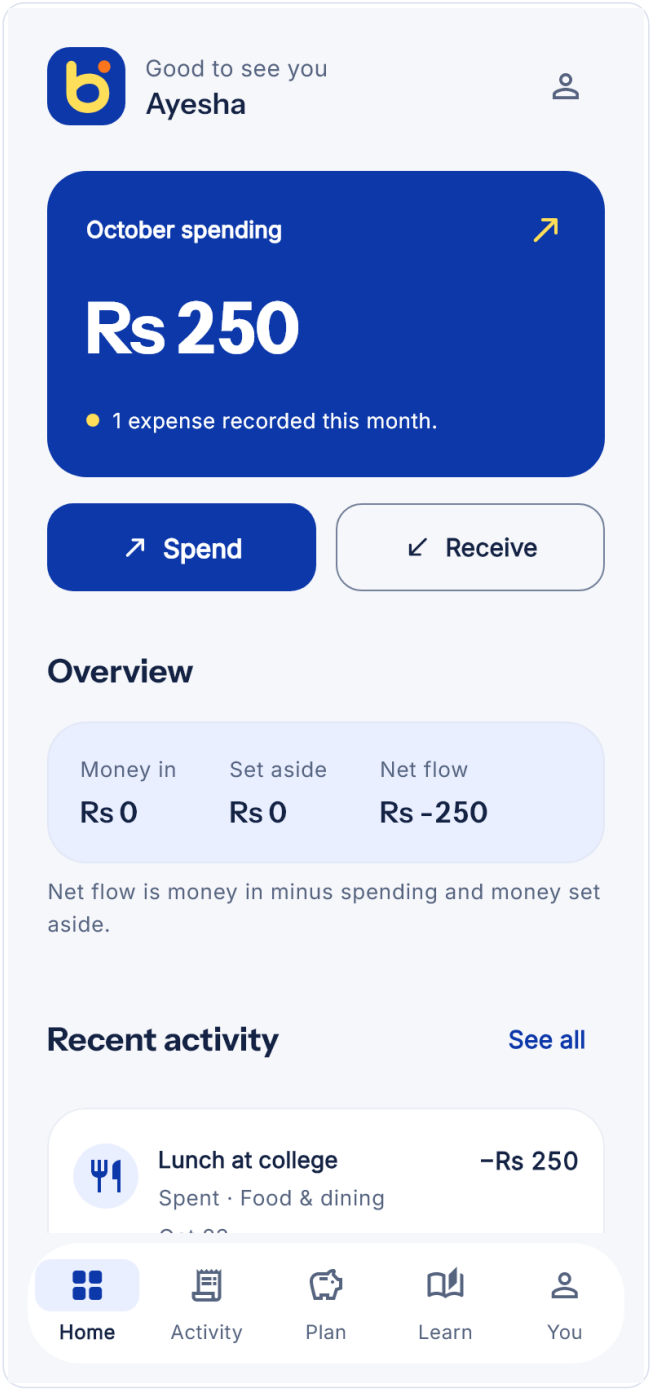

Record a first expense

Enter the amount, purchase and category. Check the date, optionally add a note, then select Save transaction.

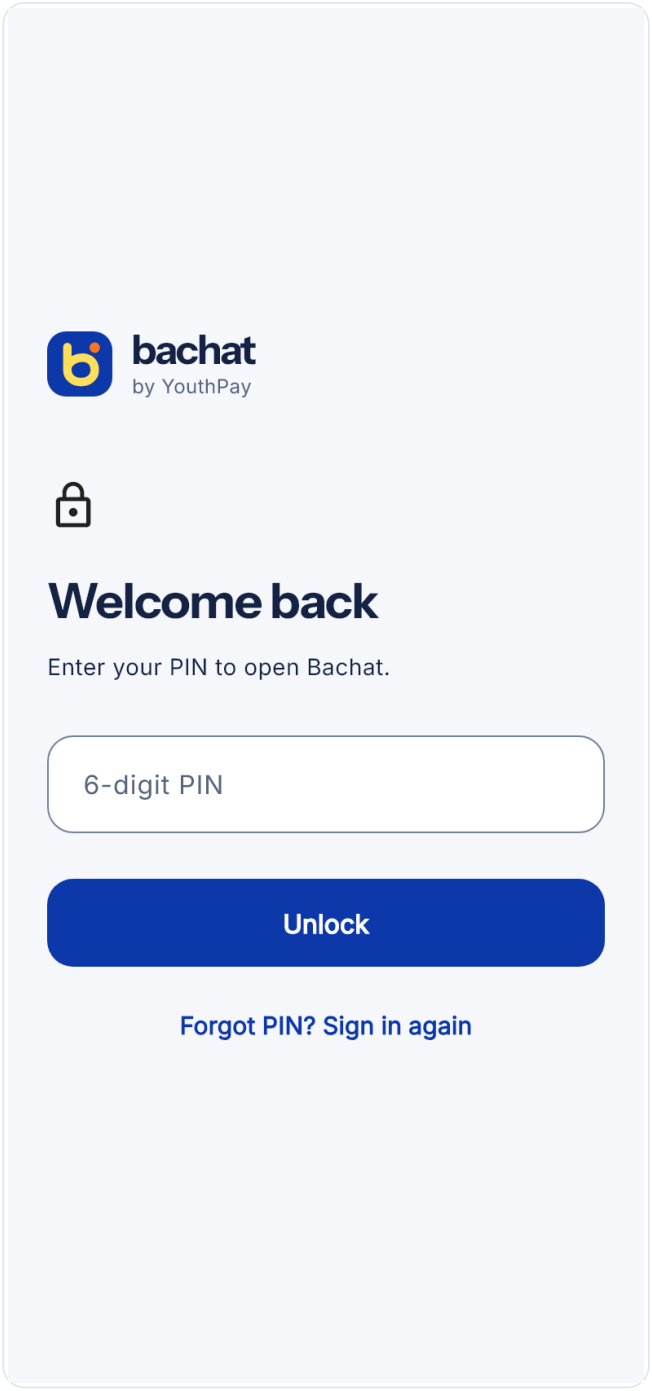

6 / See the result and return

The first entry is recorded. Device protection is ready for the next visit.

See the recorded expense

Monthly spending and recent activity update after saving. You can continue with more entries, budgets or savings goals.

Unlock on return

Enter the device PIN when Bachat locks. Forgotten PIN recovery requires signing in again; discarding unsynced changes requires confirmation.
